ToothReferral
Just Refer it

FOR DENTAL SPECIALISTS

A web form submits. A system keeps working.

They look alike on your website. What happens after a dentist hits Submit is completely different.

A web form

- Collects the details once
- Sends an email
- Stops there

A referral system

- Opens a case
- Keeps everything on it
- Brings in the whole team

THE WEB FORM

Its job ends at "Submit".

The referral becomes an email in someone's inbox. Finding it, forwarding it, calling back and keeping track all depend on one person remembering.

Patient Referral Form

If you are a doctor referring a patient to us, please fill out and submit the following form.

* Referring Doctor's Name

* Doctor's Phone

* Patient Name

Social Security Number

Birthdate

Are X-rays available?
○ Yes ○ No

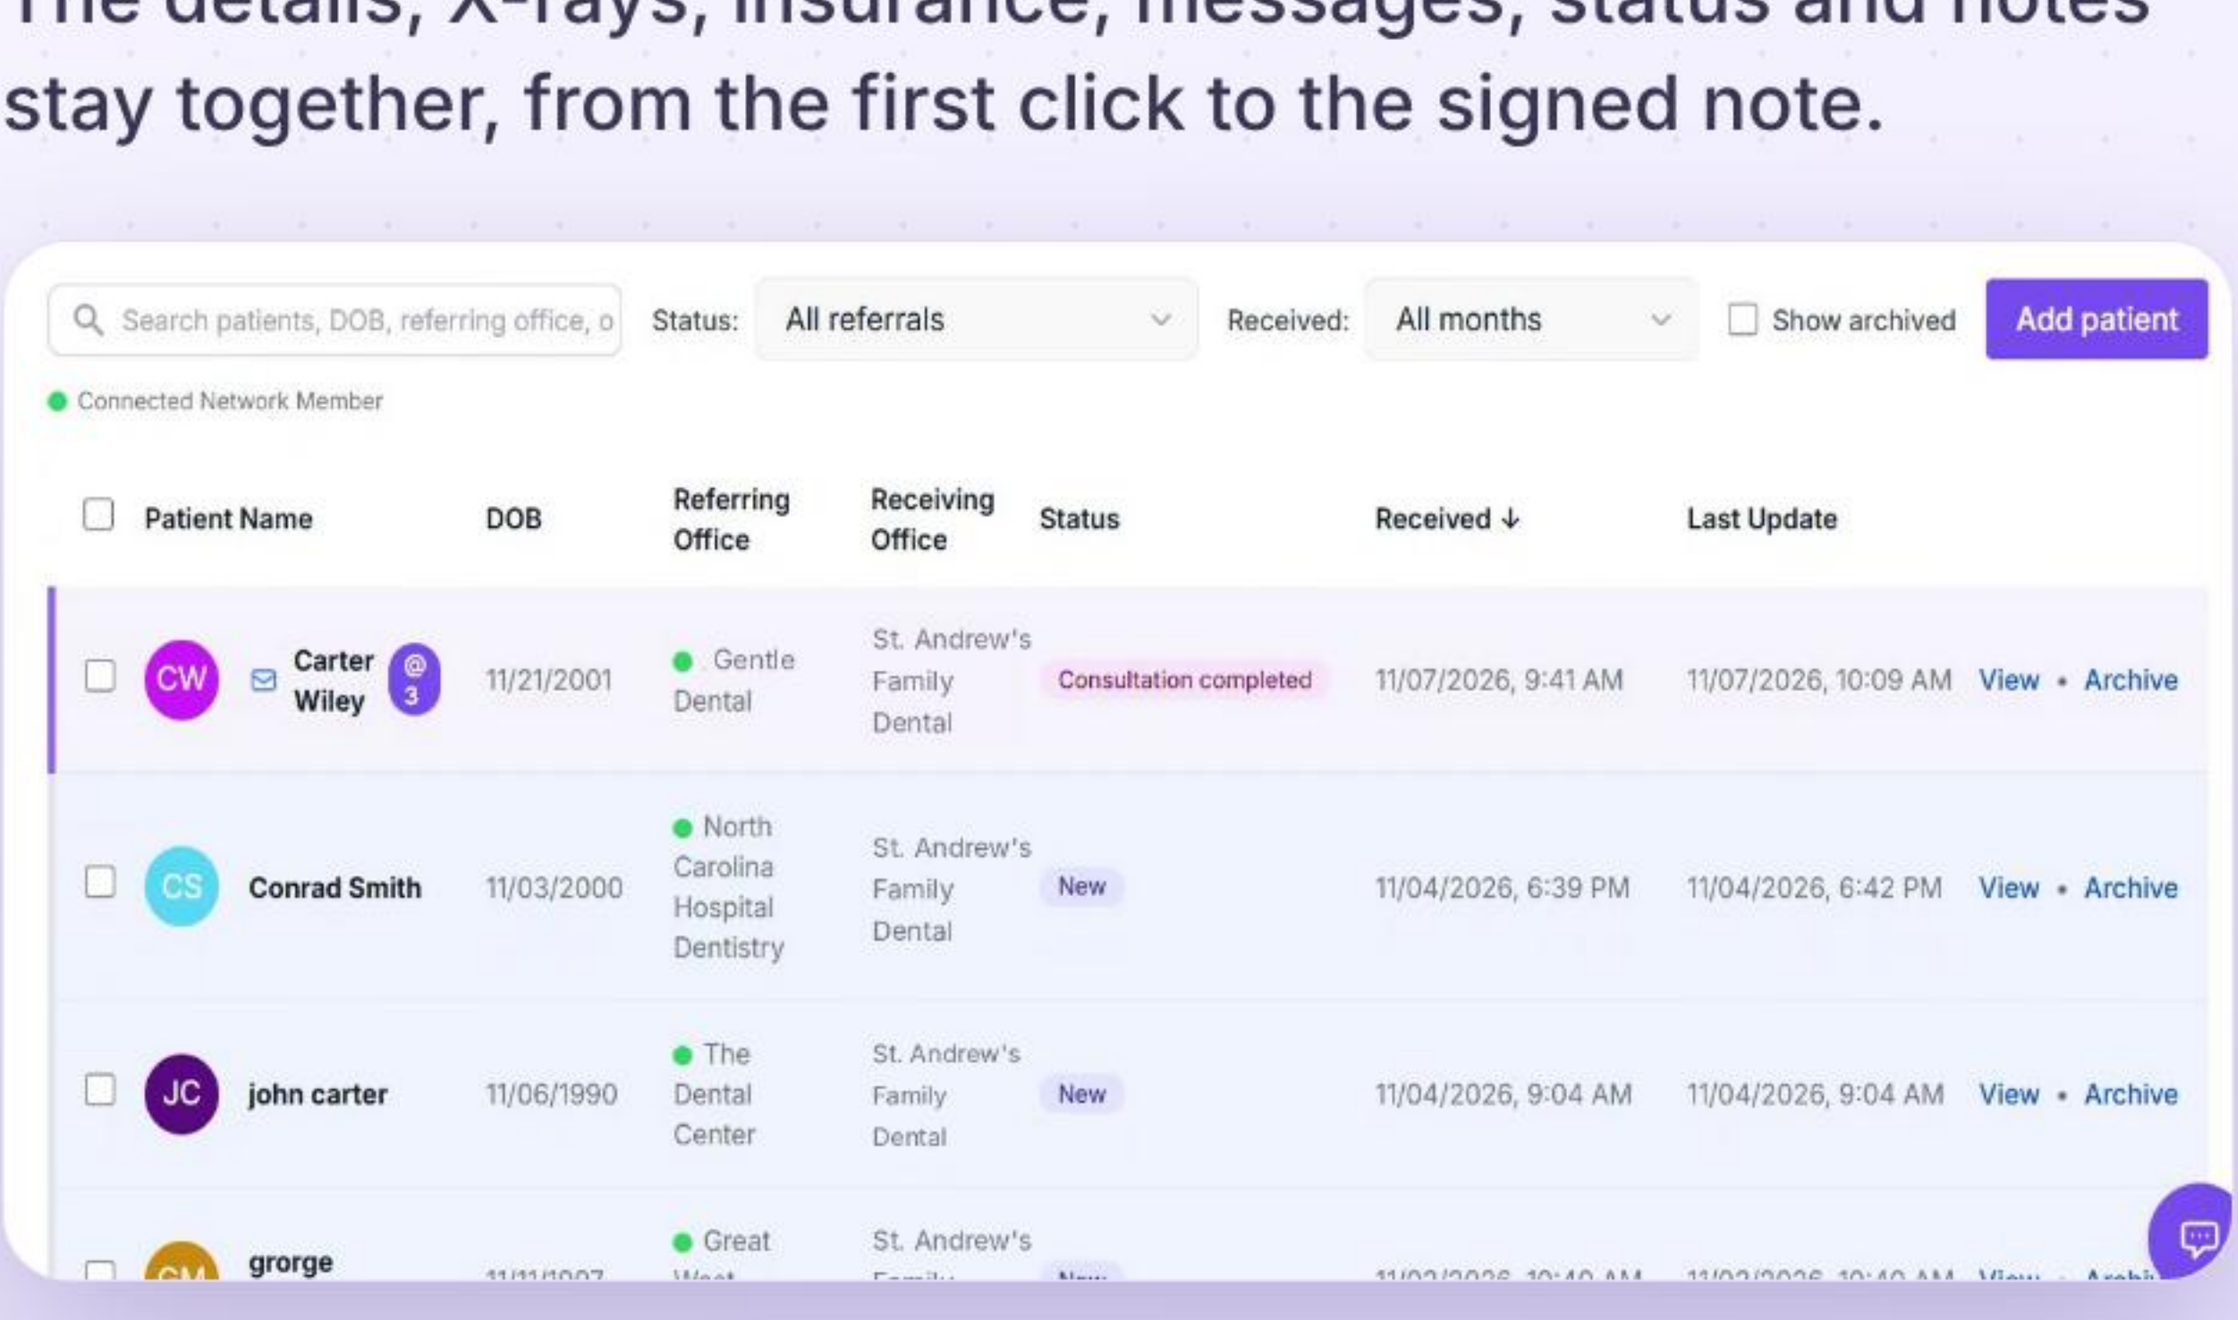

Reason for Referral (check all that apply)
☐ Evaluation ☐ Treatment ☐ Retreatment ☐ Other

Concerns and Comments

THE SYSTEM

Every referral becomes one case.

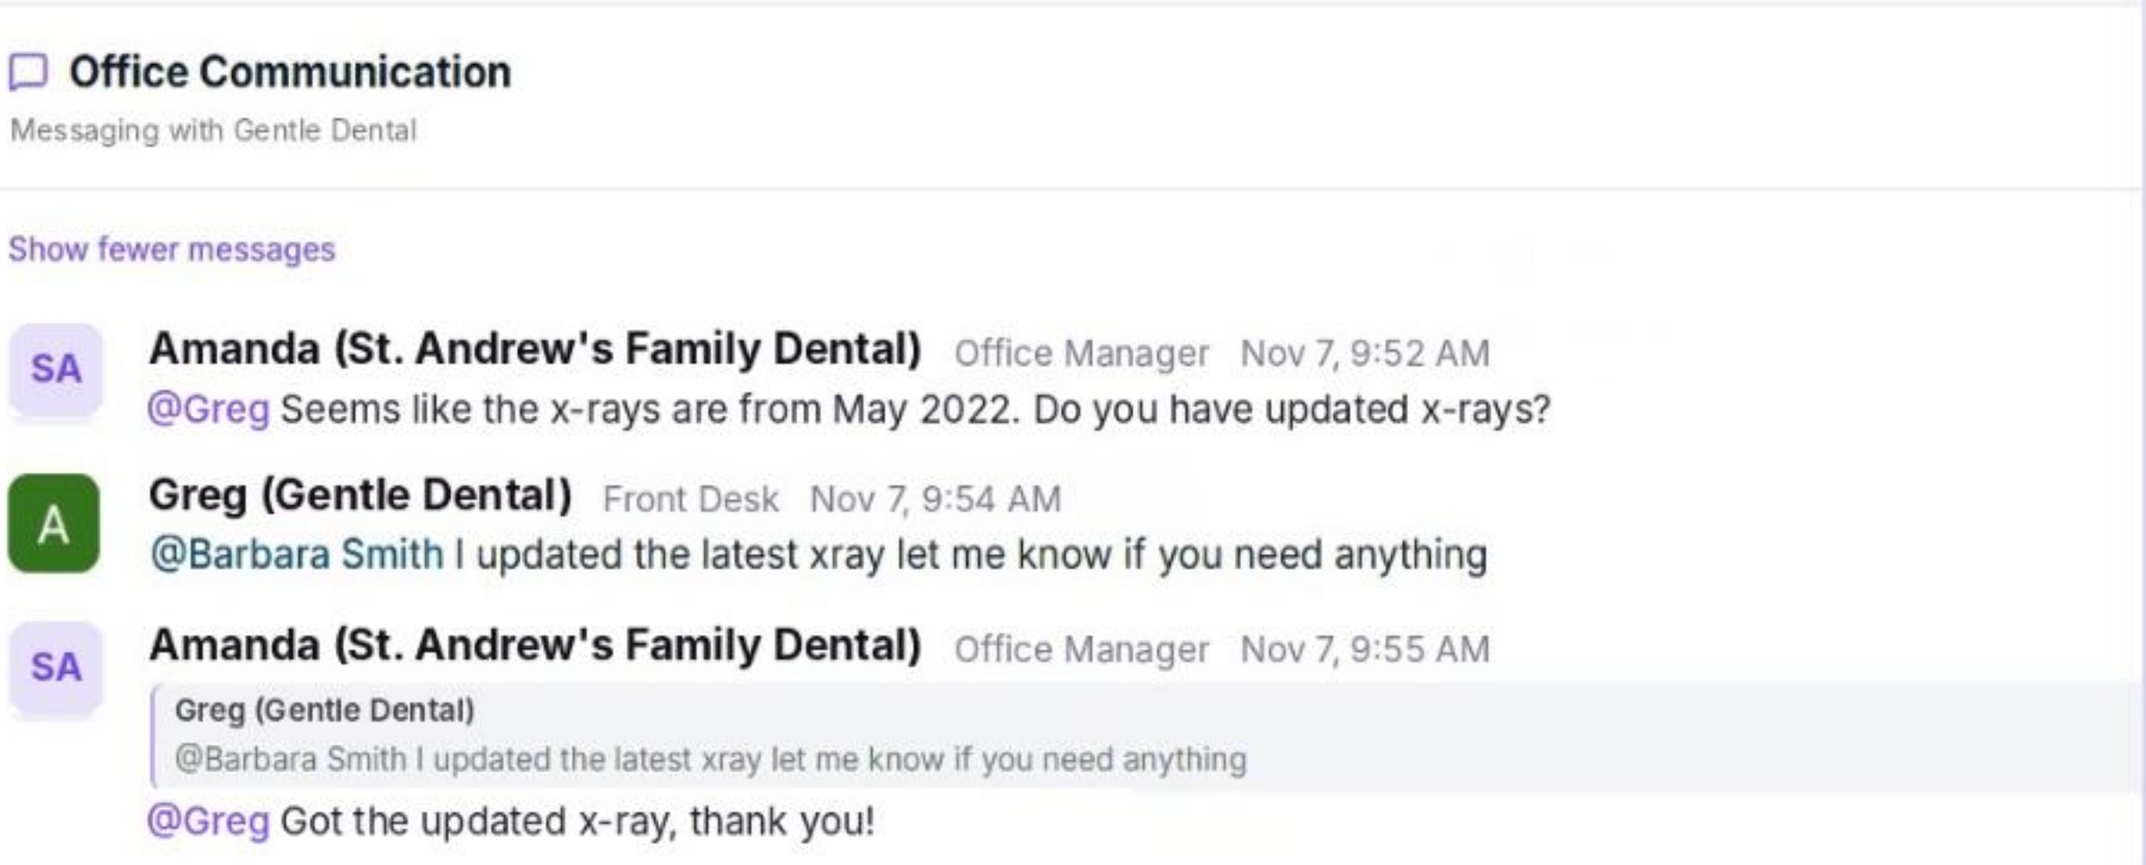

The details, X-rays, insurance, messages, status and notes stay together, from the first click to the signed note.

DIRECT COMMUNICATION

Talk to the referring office on the case.

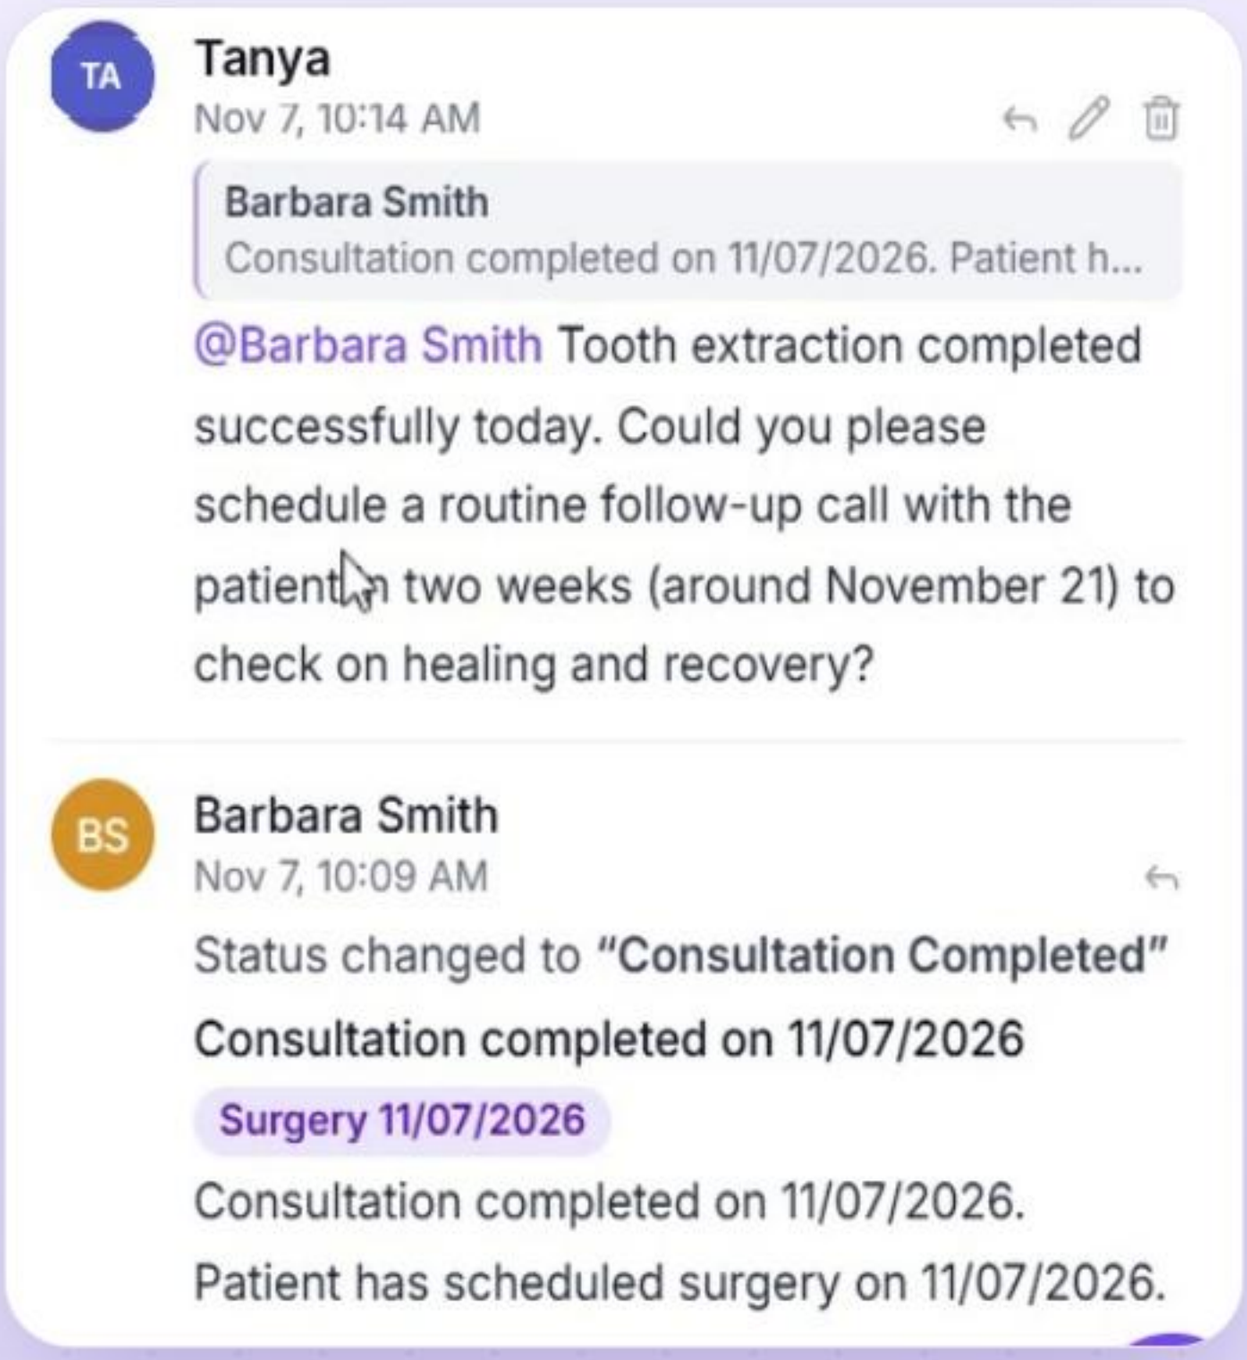

Secure cloud messages between both offices, right on the referral. No phone tag, no voicemail, no email chain.

NOTES YOUR TEAM ACTUALLY USES

Build notes, use templates, copy them into your EHR.

Staff write notes on the case, start from custom templates, and copy and paste them straight into your own electronic health record. Administrative notes stay private to your team.

THE DIFFERENCE

It's not just a form. It's a system for your team.

One case per referral, direct messages with the referring office, and every team member working from the same information.

Set up in about 5 minutes
