FOR DENTAL SPECIALISTS

Your referral problem isn't the GPs.

It's what happens to referrals after they reach your front office.

Swipe →

WHERE REFERRALS LEAK

One referral. Three ways to lose it.

A GP sends you a patient

Missed voicemail

Left on Monday. The caller is out sick Tuesday. The patient goes cold.

Wrong status click

Marked “Scheduled” instead of “Received”. It drops off every list.

Staff turnover

The coordinator quits. Their follow-ups leave with them.

ToothReferral
Just Refer it

THE COST

Tens of thousands in lost production, every month.

Not from GPs who stopped referring. From patients they already sent you.

ToothReferral

WITH TOOTHREFERRAL

Every step is tracked by the system.

- The referral lands in your shared dashboard
- Every call and voicemail is logged for the whole team
- “Scheduled” needs a real appointment and a note
- The referring GP is updated automatically

ToothReferral
Just Refer it

THE RETURN

One saved referral pays for the system.

1 referral that doesn't leak

LINKEDIN CAPTION

Your referral problem probably isn't the GPs. It's the voicemail nobody returned.

Most specialists think the fix is more GPs sending cases. Look at what happens to the cases you already get.

A voicemail is left on Monday and the person who left it is out sick on Tuesday. Someone clicks "Scheduled" when they meant "Received." A coordinator quits and their follow-ups go with them. In a busy specialty office, that adds up to tens of thousands in lost production every month.

ToothReferral gives your whole team one referral pipeline. Every call, voicemail and status change is logged where everyone can see it, a case can't be marked Scheduled without a real appointment, and the referring GP is updated automatically.

One referral that doesn't leak pays for the system. Setup takes about five minutes.

WHAT A GP GOES THROUGH FOR ONE UPDATE

Portals turn GPs into outsiders.

Click the portal link

Enter the access code

✕ “This code has expired”

✕ Call your front desk anyway

THE TOOTHREFERRAL MODEL

Both offices on one platform.

GP office
own dashboard

ToothReferral

Your office
own dashboard

Shared instantly between both

- Messages
- X-rays
- Status
- Schedules

No access codes · No portal links · No redirects

ToothReferral
Just Refer it

CLOSED LOOP

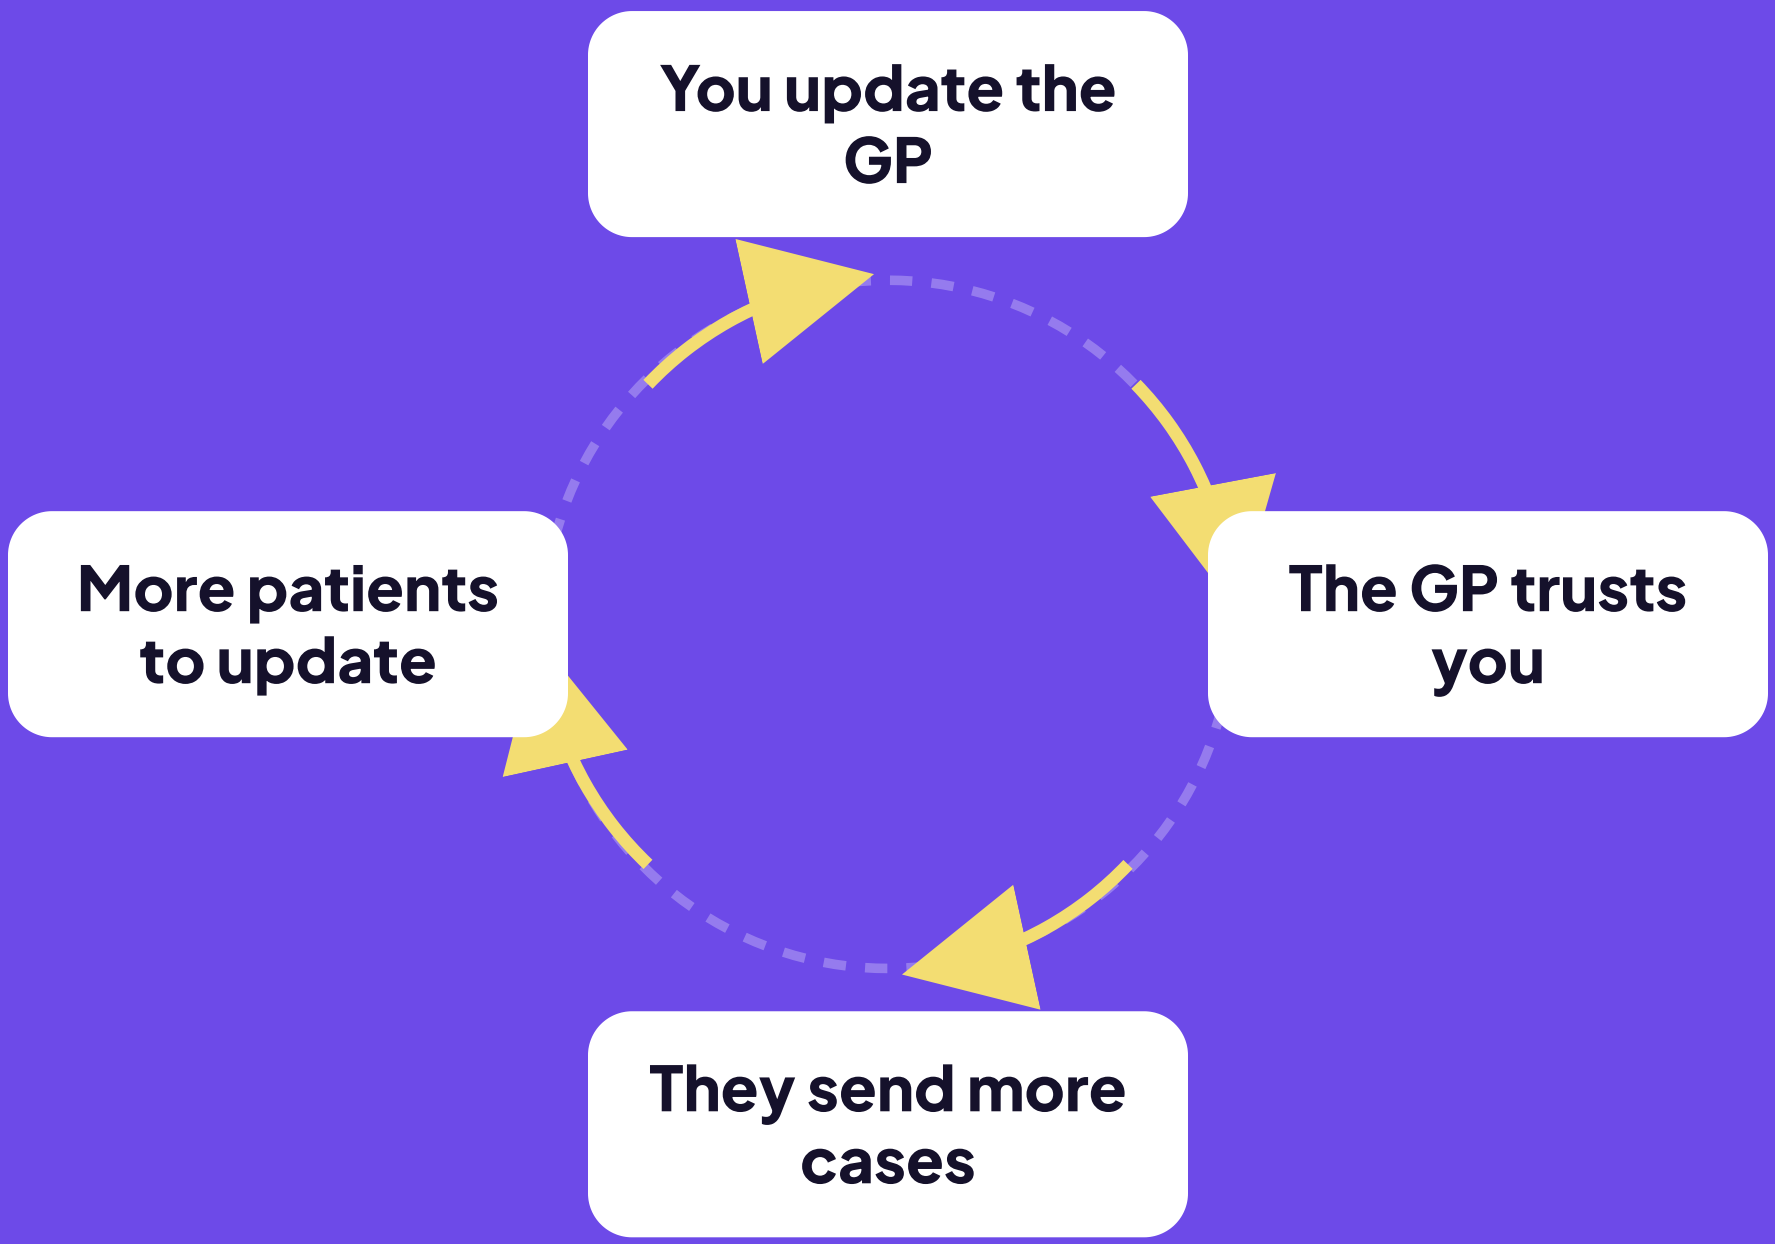

The GP sees every milestone in seconds.

- Case received — GP notified
- Outreach made — GP notified
- Consultation scheduled — GP notified
- Post-op complete — GP notified
- Returned for restorative care — GP notified

ToothReferral
Just Refer it

WHY IT MATTERS

GPs don't leave over skill. They leave over silence.

ToothReferral
Just Refer it

THE RETURN

One extra referral pays for the system.

Keep GPs informed, keep the referrals coming, and the software covers itself.

ToothReferral

LINKEDIN CAPTION

Ask a GP how they feel about your referral portal.

A portal link, an access code, a code that expired last week. Many referring offices give up and call your front desk instead, which is the phone tag the portal was meant to end.

ToothReferral puts both offices on the same platform. The GP has their own dashboard and so do you. A case, a message or an X-ray shows up in both, with no codes and no links. Every milestone, from case received to the patient returning for restorative care, reaches the GP in seconds.

GPs rarely leave a specialist over clinical skill. They leave when they stop hearing back. Keep them updated and they keep sending cases, and one extra referral pays for the system. Setup takes about five minutes.

WHAT BUYERS SEE: KEY-PERSON RISK

Your pipeline depends on one person.

Your referral pipeline today

One coordinator's memory
Who called, who's waiting, who needs a reminder.

Sticky notes and a private inbox
Nobody else can see what's pending.

They leave, the pipeline stalls
Buyers and DSOs price that risk in.

GUARDRAILS

No more accidental “Scheduled”.

Move this case to Scheduled?

Yes

Appointment and note added: status moves, GP notified

No

Missing details: it stays in the team's queue

ToothReferral

LINKEDIN CAPTION

If your front desk quit tomorrow, would your referrals still get booked?

For many specialty practices, the honest answer is no. The pipeline lives in one coordinator's head and an inbox only they check. Buyers and DSOs call this key-person risk, and they price it in.

ToothReferral keeps the pipeline in a system instead of a person. A case can't move to Scheduled without an appointment and a note, and every call, note and status change is logged, so a new hire can pick up where the last person stopped.

It pays for itself three ways: one new referral, one referral saved from leaking, or one case saved when someone leaves. Setup takes about five minutes.
