ToothReferral
Just Refer it

FOR DENTAL SPECIALISTS

Same patient. Same referral. Two very different endings.

What happens after a general dentist hits Submit depends on what's behind your website.

A web form

- Turns into an email
- Sits in a shared inbox
- Nobody knows what's next

Tooth Referral

- Lands as a case
- X-rays and insurance attached
- Every step logged

ENDING ONE · THE WEB FORM

You hit Submit. It becomes an email.

One more message in an inbox, between supply orders and voicemails.

Re: Re: Fwd: X-rays for Mrs. Chen?

CE course: implants and endo, register now

Voicemail from (919) 555-0142 (0:41)

Fax received: 3 pages

Insurance verification request - pending

New Form Submission: Contact Us

No confirmation **No status**

THE QUESTION NOBODY CAN ANSWER

Did anyone call the patient?

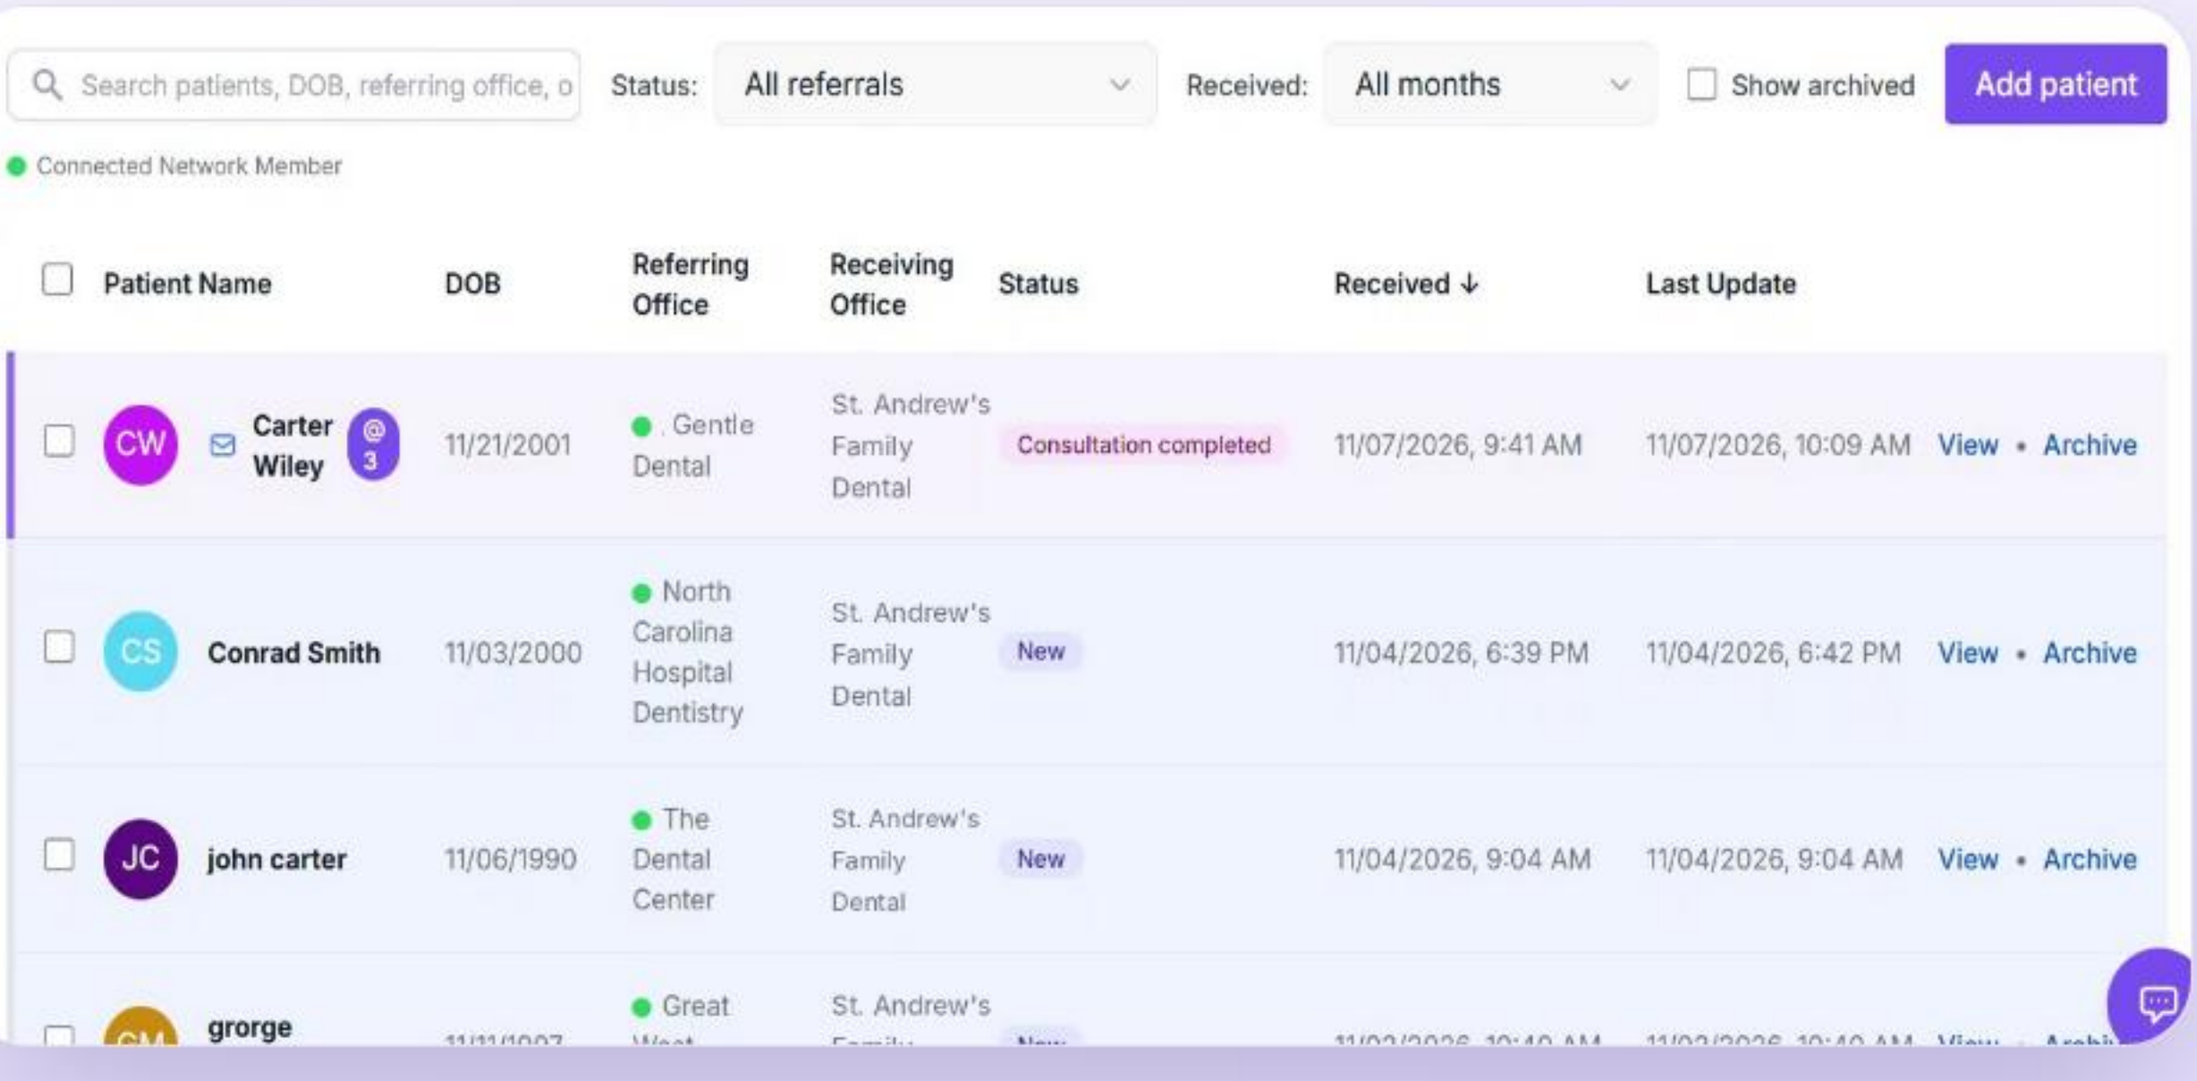

The referring office doesn't know. The specialist's team may not know either. So someone picks up the phone and asks.

ENDING TWO · TOOTH REFERRAL

The referral lands as a case.

X-rays and insurance arrive with it, and the specialist's team sees it right away.

EVERY STEP, LOGGED

Received. Contacted. Consultation scheduled.

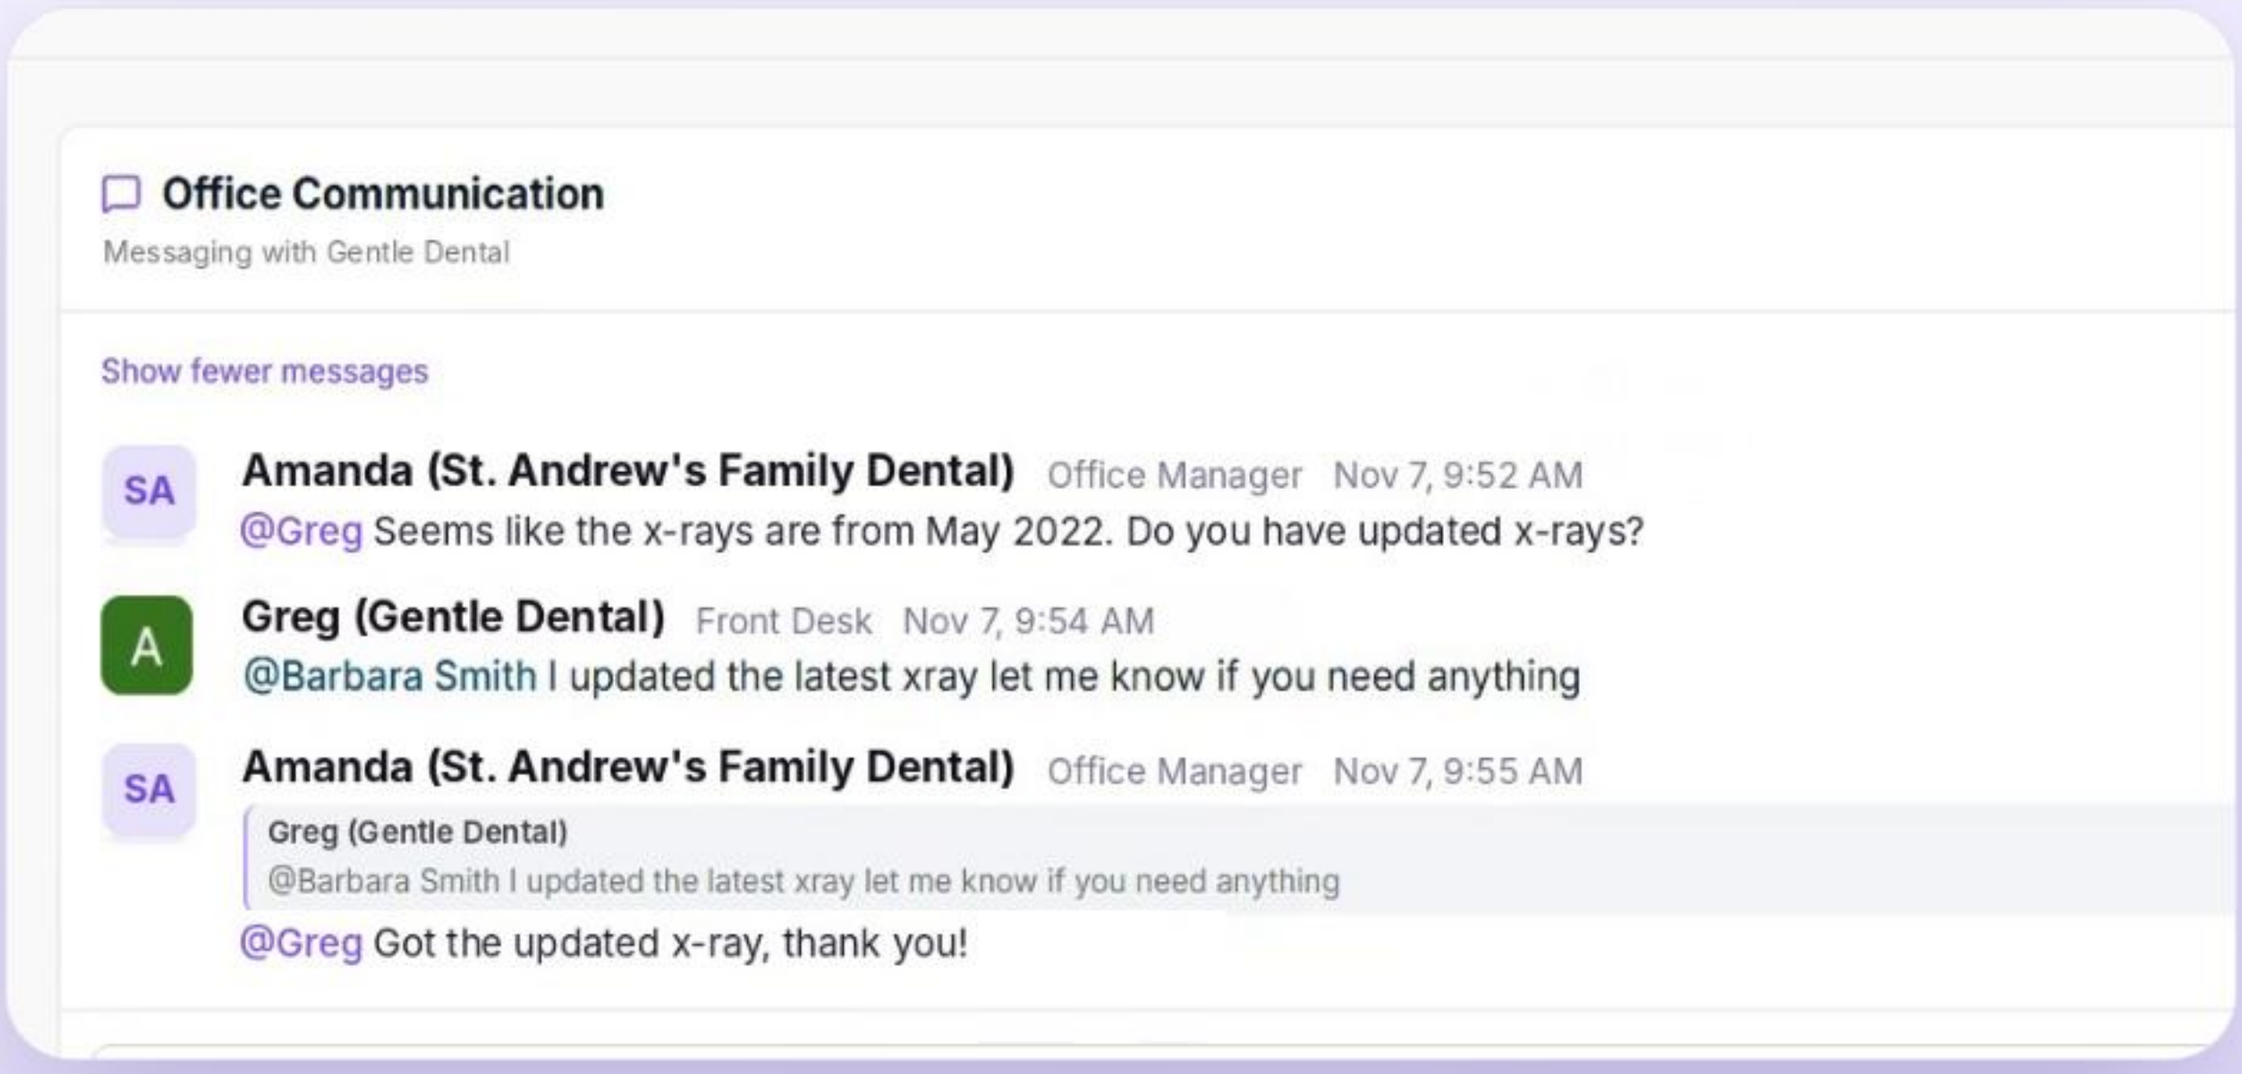

Who did it and when, on one shared timeline.

BOTH OFFICES, ONE CASE

The general dentist sees every update.

They can message the specialist right on the case. When treatment is done, a signed completion note goes back automatically.

THE DIFFERENCE

A web form sends an email. Tooth Referral starts a tracked, shared case.

It takes about five minutes to set up.

Set up in about 5 minutes
