What a referral form should do

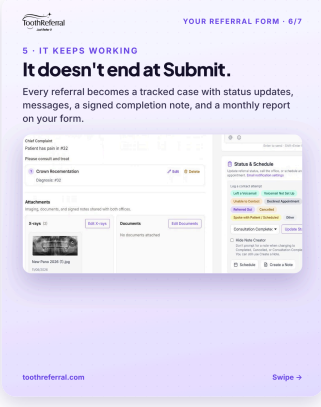

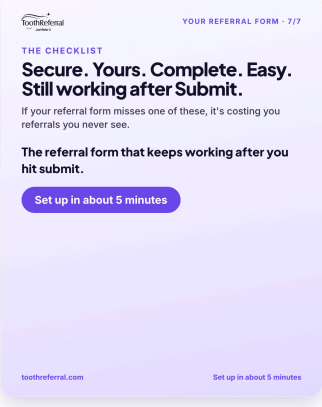

Hook (first line)

Some specialist referral forms still ask for a Social Security number. On a public web page.

Caption · LinkedIn

Some specialist referral forms still ask for a Social Security number. On a public web page.

Most referral forms look the same: a long page of boxes, a Submit button, and an email nobody tracks. They were built to collect a name and a phone number, not to start treatment.

We think a referral form should do five things:

1. Be secure. Every referral and message HIPAA compliant and encrypted, with spam and bots filtered out.
2. Be yours. Your logo, your locations, your announcements, the insurance you accept, and backlinks to your own website.
3. Be complete. Urgency, procedures, an interactive tooth chart, diagnosis, and up to 10 X-rays and 10 documents.
4. Be easy. Three short steps, no login, and the patient uploads their own insurance card through a secure link.
5. Keep working after Submit. A tracked case with status updates, messages, a signed completion note and a monthly report on your form.

That's the Tooth Referral web form. If yours misses even one of these, it's quietly costing you referrals you'll never hear about.

How many of the five does your form tick?

Caption · Instagram / Facebook

Your referral form has one job... and most of them stop at Submit 😬

Here's what a good one actually does:
✅ Secure: HIPAA compliant, encrypted, spam filtered
✅ Yours: your logo, locations, insurance and backlinks to your site
✅ Complete: tooth chart, diagnosis, up to 10 X-rays and 10 documents
✅ Easy: 3 steps, no login, patients upload their own insurance
✅ Still working: tracked case, messages, signed completion note

Swipe through all five ➡️ and count how many your form hits.

Save this for your next website update 📌

Short version · X / Threads

A referral form should be secure, yours, complete, easy, and still working after Submit. Most stop at the email. Tooth Referral starts a tracked case.

Trending keywords (use in alt text and the first comment)

HIPAA compliant referral form | dental website referral form | secure patient referral | online referral form for specialists | dental SEO backlinks | patient insurance upload | dental tooth chart | referral form best practices

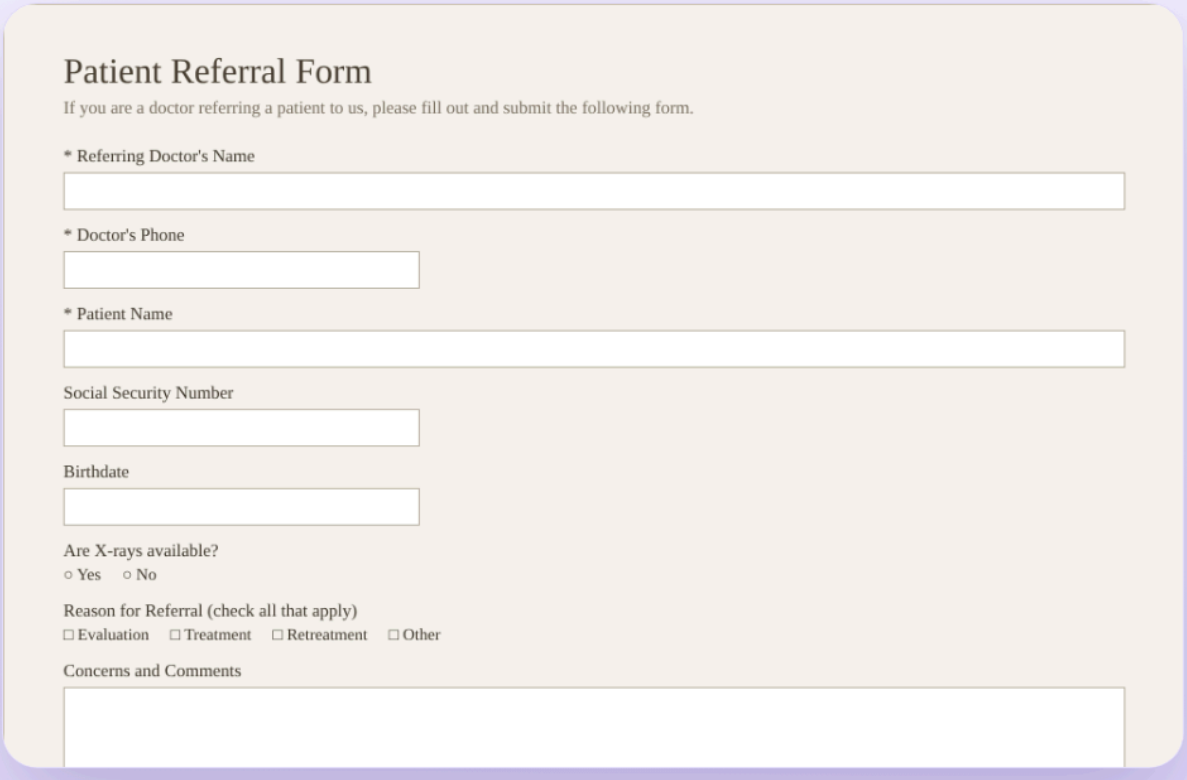

Alt text: Carousel listing five things a dental referral form should do: be secure and HIPAA compliant, carry the practice's own branding, collect complete clinical details with a tooth chart and X-rays, take three steps with no login, and keep working after submit as a tracked case.

SPECIALIST WEBSITES

Most referral forms look the same.

A long page of boxes, a Submit button, and an email nobody tracks. Some even ask for a Social Security number.

Patient Referral Form

If you are a doctor referring a patient to us, please fill out and submit the following form.

* Referring Doctor's Name

* Doctor's Phone

* Patient Name

Social Security Number

Birthdate

Are X-rays available?
○ Yes ○ No

Reason for Referral (check all that apply)
☐ Evaluation ☐ Treatment ☐ Retreatment ☐ Other

Concerns and Comments

ToothReferral
Just Refer it

1 · SECURE

Built for patient information.

- Every referral and every message is **HIPAA compliant and encrypted.**
- **Spam and bots are filtered out**, so your team only sees real referrals.
- No Social Security numbers on a public web page.

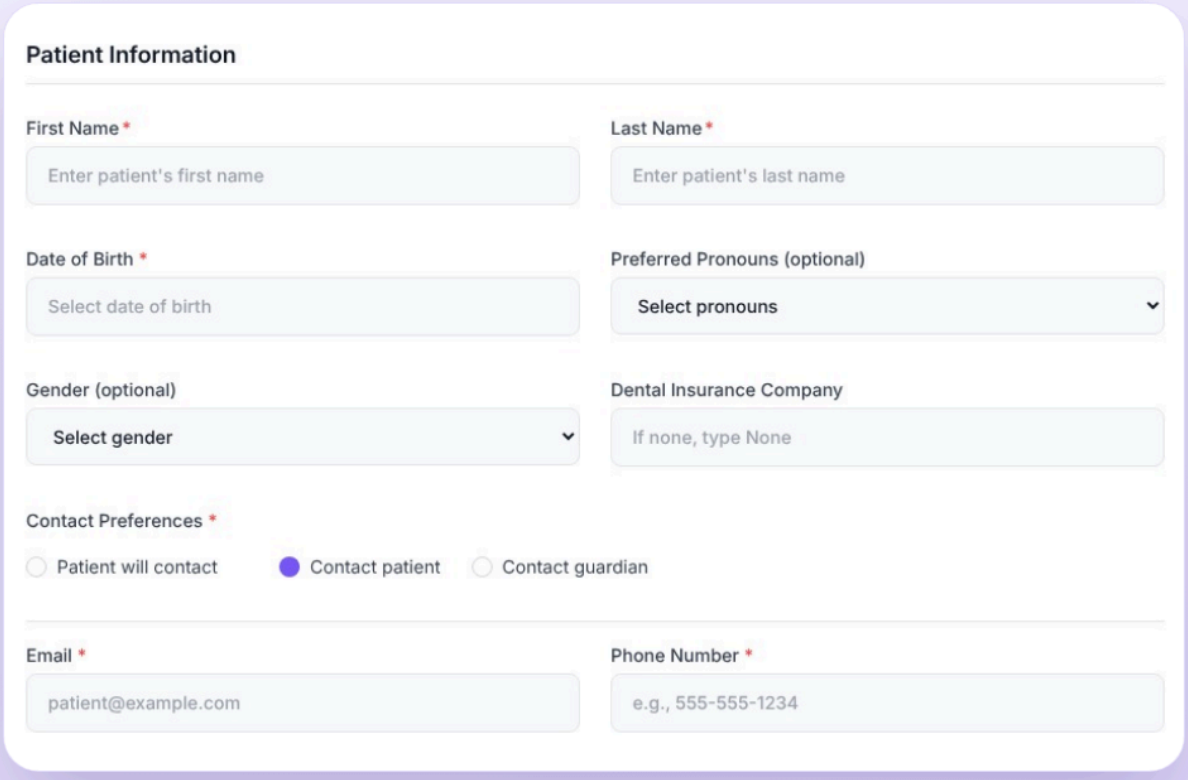

HIPAA

2 · YOURS

It looks like your practice, not ours.

On your own website: your logo, your locations, your announcements, the insurance you accept and what you're known for.

3 · COMPLETE

Everything you need for a first visit.

Urgency, procedures, an interactive tooth chart, diagnosis, and up to 10 X-rays and 10 documents.

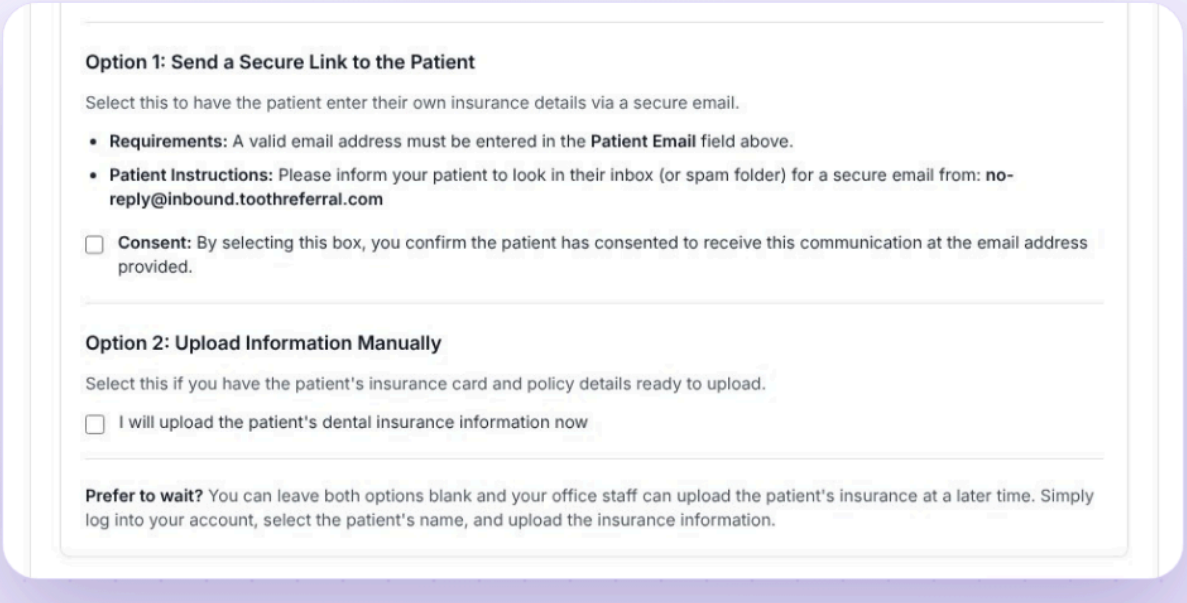

ToothReferral
Just Refer it

4 · EASY

Three short steps. No login.

The patient uploads their own insurance card through a secure link, so the front desk isn't retyping it.

Option 1: Send a Secure Link to the Patient

Select this to have the patient enter their own insurance details via a secure email.

- **Requirements:** A valid email address must be entered in the **Patient Email** field above.
- **Patient Instructions:** Please inform your patient to look in their inbox (or spam folder) for a secure email from: **no-reply@inbound.toothreferral.com**

☐ **Consent:** By selecting this box, you confirm the patient has consented to receive this communication at the email address provided.

Option 2: Upload Information Manually

Select this if you have the patient's insurance card and policy details ready to upload.

☐ I will upload the patient's dental insurance information now

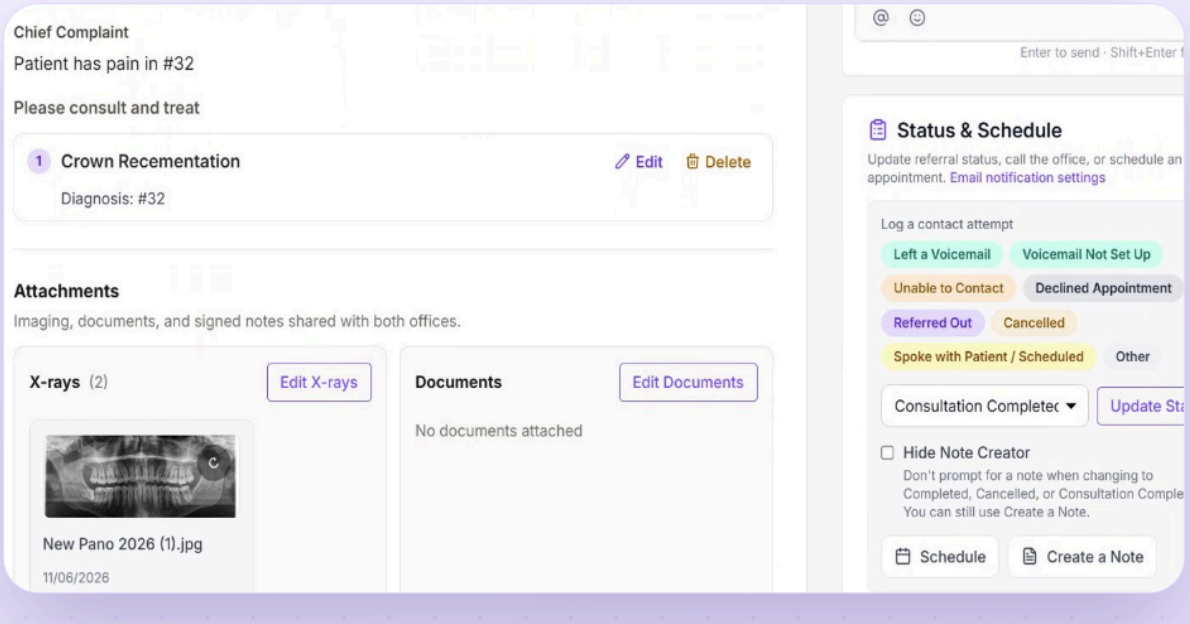

Prefer to wait? You can leave both options blank and your office staff can upload the patient's insurance at a later time. Simply log into your account, select the patient's name, and upload the insurance information.

5 · IT KEEPS WORKING

It doesn't end at Submit.

Every referral becomes a tracked case with status updates, messages, a signed completion note, and a monthly report on your form.

THE CHECKLIST

Secure. Yours. Complete. Easy. Still working after Submit.

If your referral form misses one of these, it's costing you referrals you never see.

The referral form that keeps working after you hit submit.
