TOOTH REFERRAL · SOCIAL POSTS

Web form videos: 3 carousels + 2 image posts

Posts to run alongside the three web-form videos. Each post has the slides, the caption (with the hook first), a shorter version for X/Threads, trending keywords and hashtags. Slides are 1080 × 1350 (4:5), ready for LinkedIn, Instagram and Facebook; the PNG files are in **carousels/web-form-posts/slides/**.

How to post

- **LinkedIn:** upload the slides as a document (PDF carousel) or as images; paste the LinkedIn caption; keep 3 to 5 hashtags.
- **Instagram / Facebook:** upload the slides as a carousel; use the Instagram caption with the full hashtag set.
- **Pair with the video:** post the carousel 2 to 3 days after its video, or pin the video in the comments.
- Best windows for dental audiences: Tuesday to Thursday, 7 to 9 am or 12 to 1 pm local time.

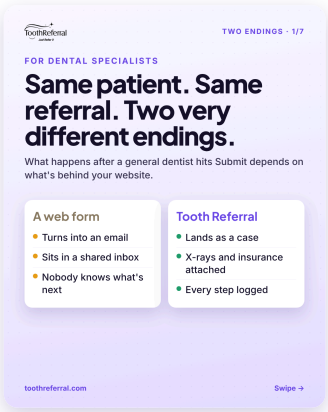

The posts

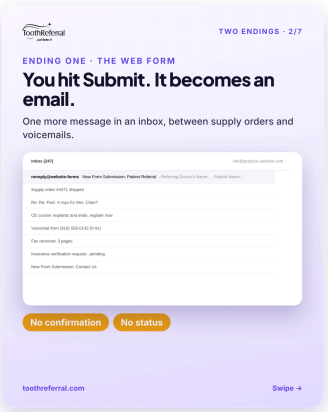

- **Same patient, two endings** · Carousel · 7 slides · pairs with camp-form-vs-software.mp4
- **What a referral form should do** · Carousel · 7 slides · pairs with camp-form-compare-v2.mp4
- **One referral, eight days** · Carousel · 7 slides · pairs with camp-same-referral-two-ways.mp4
- **A web form sends an email** · Single image · pairs with all three
- **5 questions to ask your referral form** · Single image · pairs with all three

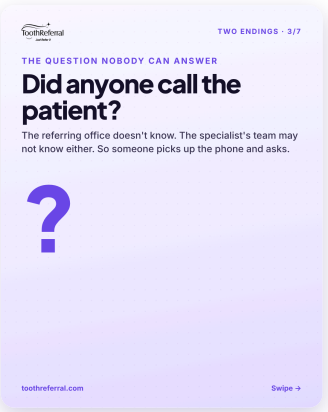

Claims match the sourced compare sheet; analytics numbers come from the canonical analytics reference. Offices, patients and staff in the examples are fictional. No competitors are named or shown.

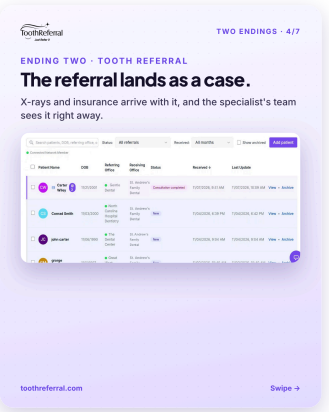

POST 1 · CAROUSEL · 7 SLIDES · PAIRS WITH CAMP-FORM-VS-SOFTWARE.MP4

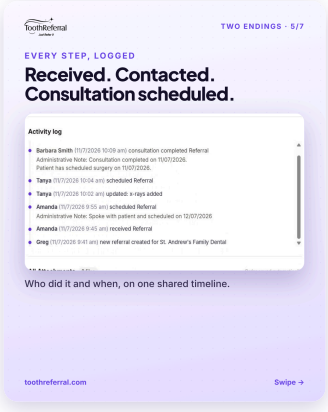

Same patient, two endings

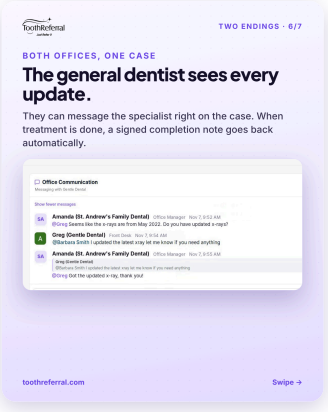

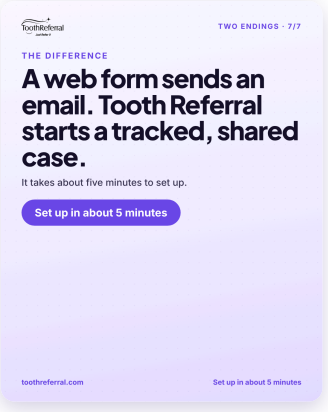

Hook (first line)

Same patient. Same referral. One ends in an inbox, the other ends with a signed note.

Caption · LinkedIn

Same patient. Same referral. One ends in an inbox, the other ends with a signed note.

Here's the part most specialist websites don't think about: what happens after a general dentist hits Submit?

With a web form, the referral turns into an email. It lands in a shared inbox next to supply orders and voicemails. No confirmation, no status. Did anyone call the patient? Usually somebody has to pick up the phone to find out.

With Tooth Referral, the same referral lands as a case. The X-rays and the insurance come with it, your team sees it right away, and every step is logged: received, contacted, consultation scheduled. The referring dentist sees each update and can message you on the case. When treatment is done, a signed completion note goes back on its own.

Nobody did anything wrong in the first version. The form just stops working the moment it's sent.

Swipe through both endings. Which one does your website give the dentists who trust you with their patients?

#DentalReferrals #DentalSpecialist #Endodontics #DentalPracticeManagement #PatientExperience

Caption · Instagram / Facebook

Same patient. Same referral. Two very different endings 👀

A web form turns a referral into one more email in a busy inbox. No status, no confirmation, and nobody's sure if the patient got a call.

Tooth Referral turns it into a case: X-rays and insurance attached, every step logged, the referring dentist kept in the loop, and a signed completion note sent back when you're done.

Swipe to see both endings ➡️

Which one is on your website right now? Tell us in the comments.

Set up in about 5 minutes. Link in bio.

Short version · X / Threads

Same referral, two endings. A web form sends an email and hopes someone reads it. Tooth Referral starts a case: X-rays, insurance, status and a signed note back to the dentist.

Trending keywords (use in alt text and the first comment)

dental referral software | referral tracking | web form vs software | dental practice workflow | patient referral status | specialist referral network | HIPAA compliant referrals | front desk efficiency

Alt text: Carousel comparing two outcomes of the same dental referral: a web form that becomes an email in an inbox, and Tooth Referral, where the referral becomes a tracked case with X-rays, insurance, a step-by-step activity log, messages between offices and a signed completion note.

ToothReferral
Just Refer it

FOR DENTAL SPECIALISTS

Same patient. Same referral. Two very different endings.

What happens after a general dentist hits Submit depends on what's behind your website.

A web form

- Turns into an email
- Sits in a shared inbox
- Nobody knows what's next

Tooth Referral

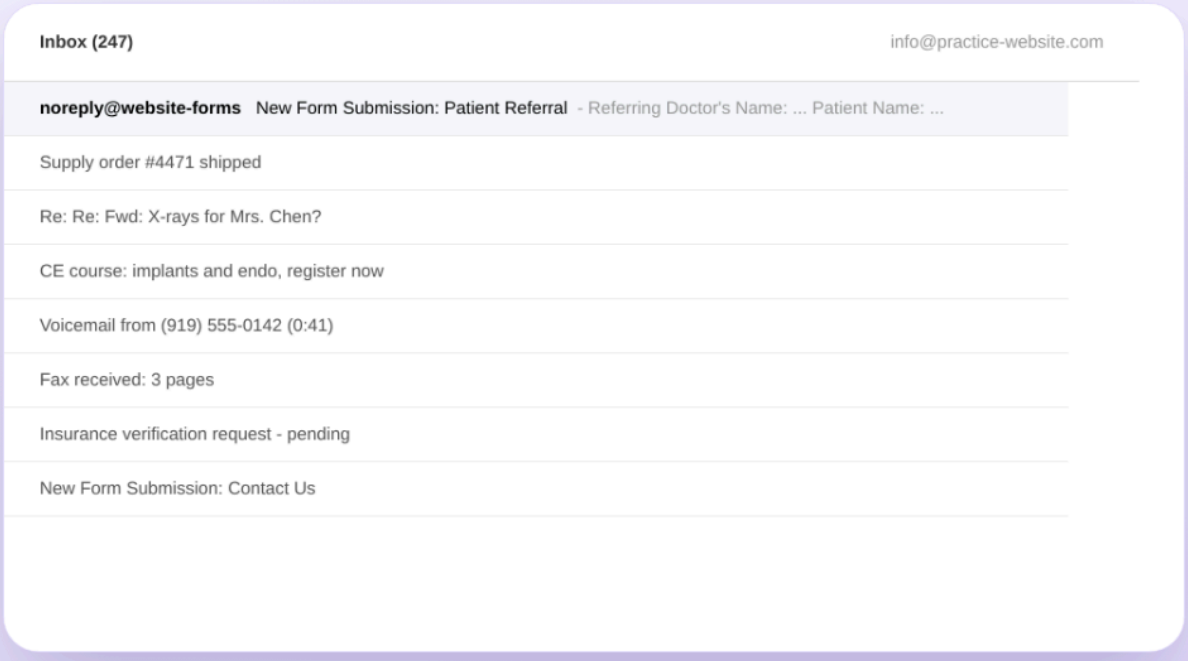

- Lands as a case
- X-rays and insurance attached
- Every step logged

ToothReferral
Just Refer it

ENDING ONE · THE WEB FORM

You hit Submit. It becomes an email.

One more message in an inbox, between supply orders and voicemails.

No confirmation **No status**

toothreferral.com

Swipe →

ToothReferral
Just Refer it

THE QUESTION NOBODY CAN ANSWER

Did anyone call the patient?

The referring office doesn't know. The specialist's team may not know either. So someone picks up the phone and asks.

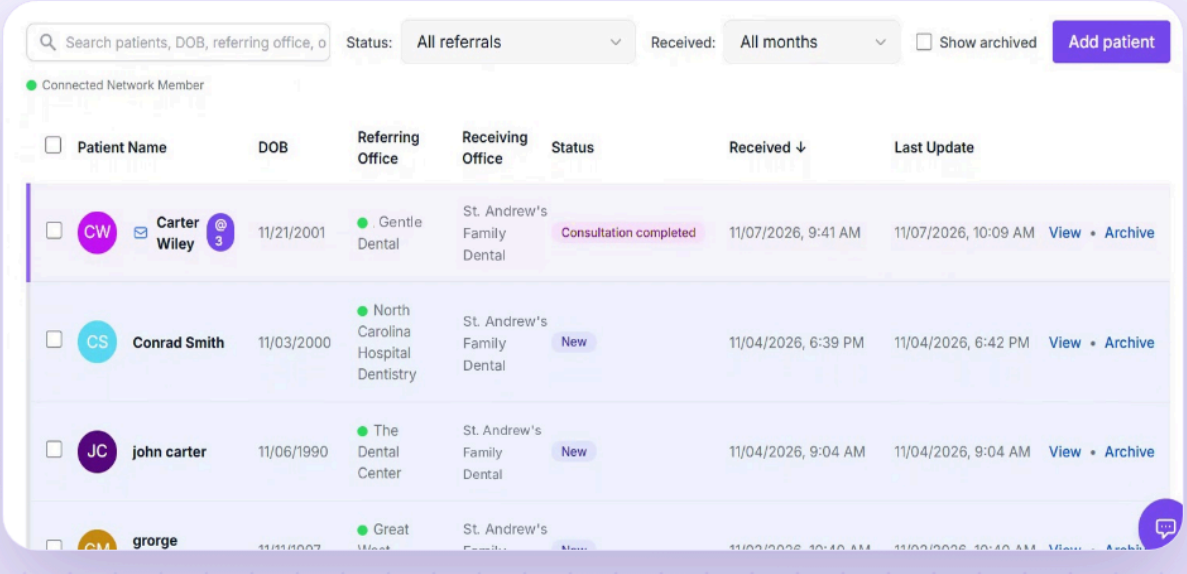

ToothReferral
Just Refer it

ENDING TWO · TOOTH REFERRAL

The referral lands as a case.

X-rays and insurance arrive with it, and the specialist's team sees it right away.

ToothReferral
Just Refer it

EVERY STEP, LOGGED

Received. Contacted. Consultation scheduled.

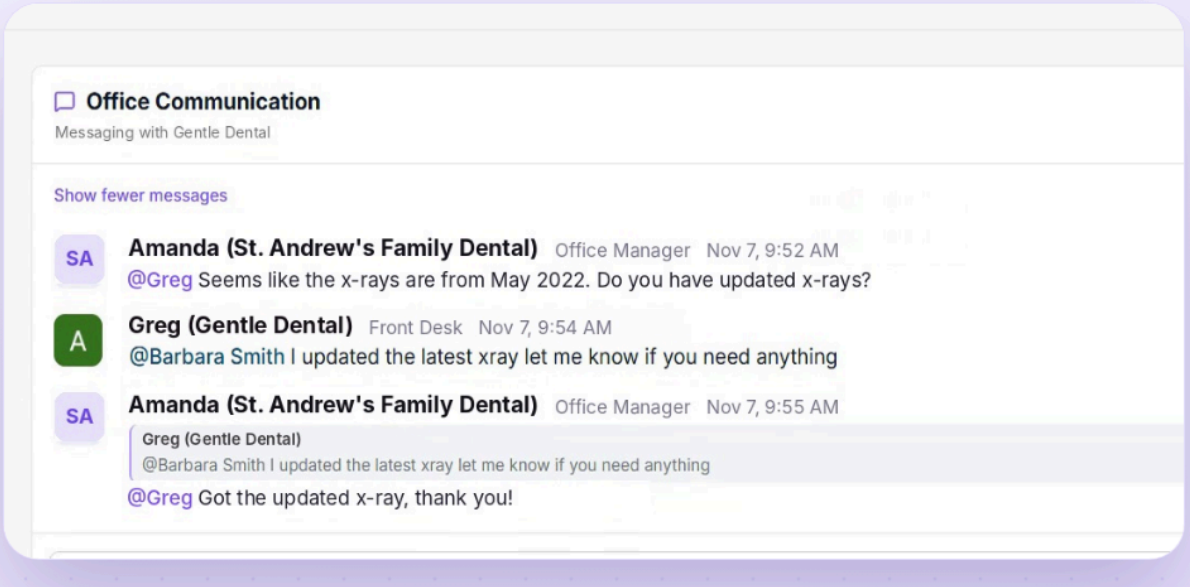

Who did it and when, on one shared timeline.

ToothReferral
Just Refer it

BOTH OFFICES, ONE CASE

The general dentist sees every update.

They can message the specialist right on the case. When treatment is done, a signed completion note goes back automatically.

ToothReferral
Just Refer it

THE DIFFERENCE

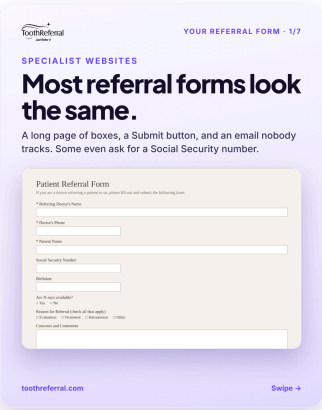

A web form sends an email. Tooth Referral starts a tracked, shared case.

It takes about five minutes to set up.

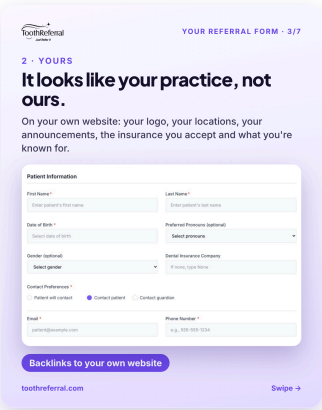

Set up in about 5 minutes

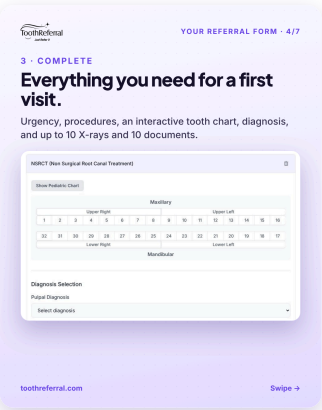

POST 2 · CAROUSEL · 7 SLIDES · PAIRS WITH CAMP-FORM-COMPARE-V2.MP4

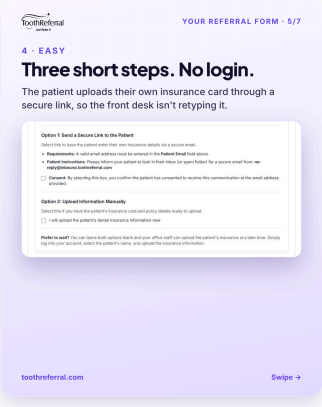

What a referral form should do

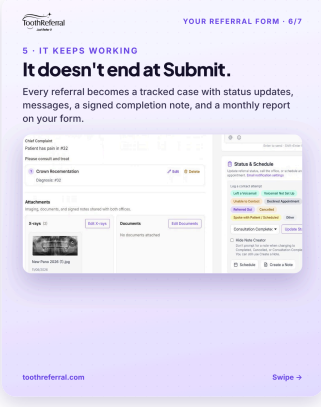

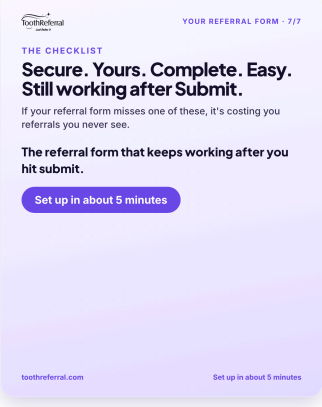

Hook (first line)

Some specialist referral forms still ask for a Social Security number. On a public web page.

Caption · LinkedIn

Some specialist referral forms still ask for a Social Security number. On a public web page.

Most referral forms look the same: a long page of boxes, a Submit button, and an email nobody tracks. They were built to collect a name and a phone number, not to start treatment.

We think a referral form should do five things:

1. Be secure. Every referral and message HIPAA compliant and encrypted, with spam and bots filtered out.
2. Be yours. Your logo, your locations, your announcements, the insurance you accept, and backlinks to your own website.
3. Be complete. Urgency, procedures, an interactive tooth chart, diagnosis, and up to 10 X-rays and 10 documents.
4. Be easy. Three short steps, no login, and the patient uploads their own insurance card through a secure link.
5. Keep working after Submit. A tracked case with status updates, messages, a signed completion note and a monthly report on your form.

That's the Tooth Referral web form. If yours misses even one of these, it's quietly costing you referrals you'll never hear about.

How many of the five does your form tick?

#DentalReferrals #HIPAACompliance #DentalSpecialist #DentalMarketing #DentalTech

Caption · Instagram / Facebook

Your referral form has one job... and most of them stop at Submit 😬

Here's what a good one actually does:
✅ Secure: HIPAA compliant, encrypted, spam filtered
✅ Yours: your logo, locations, insurance and backlinks to your site
✅ Complete: tooth chart, diagnosis, up to 10 X-rays and 10 documents
✅ Easy: 3 steps, no login, patients upload their own insurance
✅ Still working: tracked case, messages, signed completion note

Swipe through all five ➡️ and count how many your form hits.

Save this for your next website update 📌

Just Refer it

SPECIALIST WEBSITES

Most referral forms look the same.

A long page of boxes, a Submit button, and an email nobody tracks. Some even ask for a Social Security number.

Patient Referral Form

If you are a doctor referring a patient to us, please fill out and submit the following form.

* Referring Doctor's Name

* Doctor's Phone

* Patient Name

Social Security Number

Birthdate

Are X-rays available?
○ Yes ○ No

Reason for Referral (check all that apply)
☐ Evaluation ☐ Treatment ☐ Retreatment ☐ Other

Concerns and Comments

ToothReferral
Just Refer it

1 · SECURE

Built for patient information.

- Every referral and every message is **HIPAA compliant and encrypted.**
- **Spam and bots are filtered out**, so your team only sees real referrals.
- No Social Security numbers on a public web page.

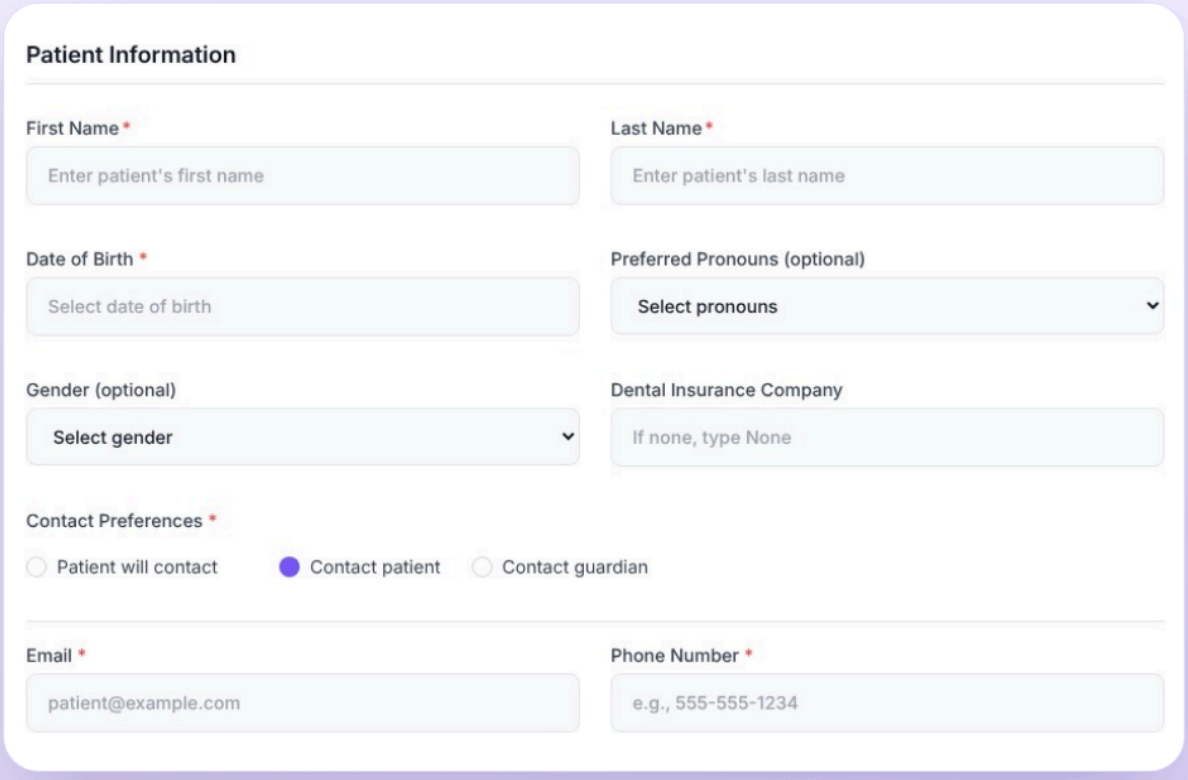

HIPAA

ToothReferral
Just Refer it

2 · YOURS

It looks like your practice, not ours.

On your own website: your logo, your locations, your announcements, the insurance you accept and what you're known for.

Backlinks to your own website

Swipe →

ToothReferral
Just Refer it

3 · COMPLETE

Everything you need for a first visit.

Urgency, procedures, an interactive tooth chart, diagnosis, and up to 10 X-rays and 10 documents.

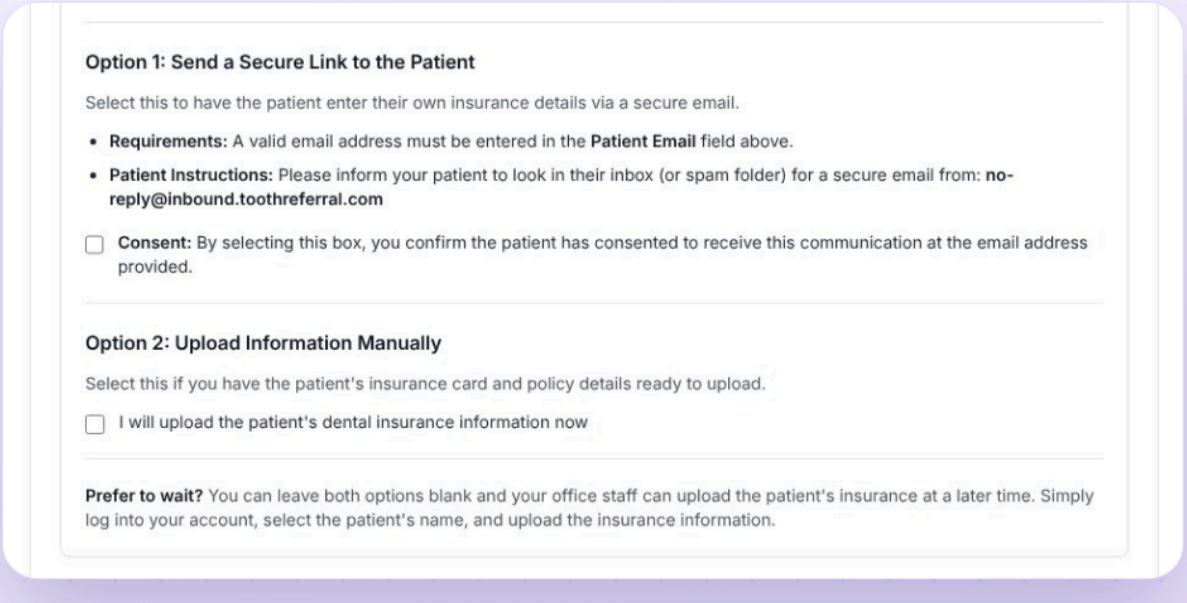

ToothReferral
Just Refer it

4 · EASY

Three short steps. No login.

The patient uploads their own insurance card through a secure link, so the front desk isn't retyping it.

Option 1: Send a Secure Link to the Patient

Select this to have the patient enter their own insurance details via a secure email.

- **Requirements:** A valid email address must be entered in the **Patient Email** field above.
- **Patient Instructions:** Please inform your patient to look in their inbox (or spam folder) for a secure email from: **no-reply@inbound.toothreferral.com**

☐ **Consent:** By selecting this box, you confirm the patient has consented to receive this communication at the email address provided.

Option 2: Upload Information Manually

Select this if you have the patient's insurance card and policy details ready to upload.

☐ I will upload the patient's dental insurance information now

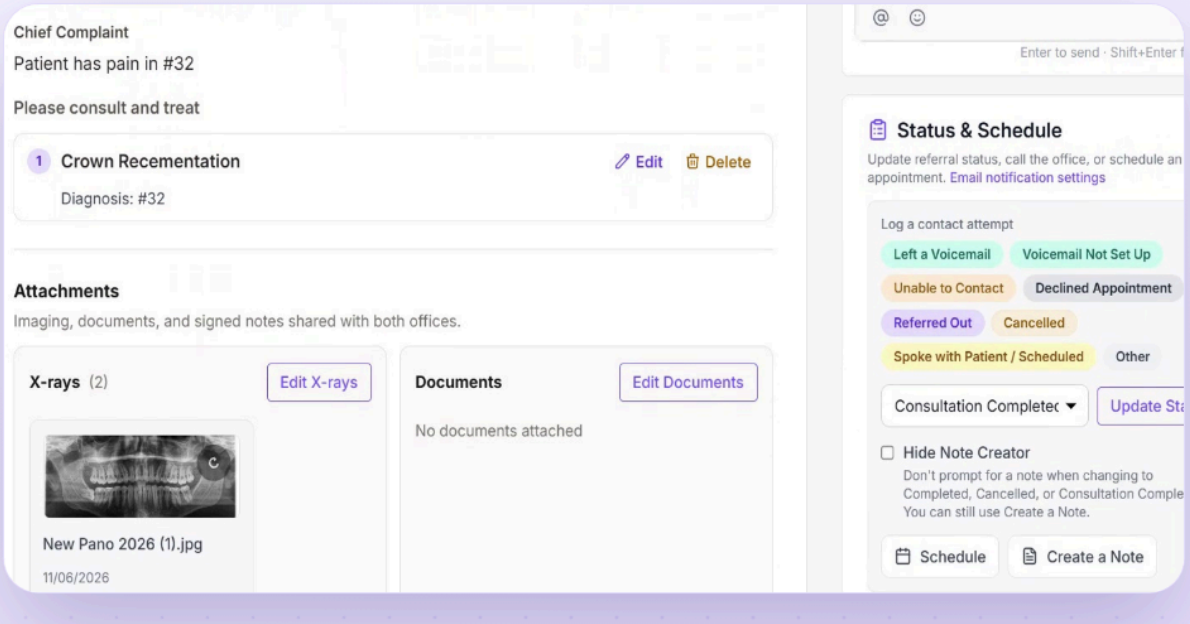

Prefer to wait? You can leave both options blank and your office staff can upload the patient's insurance at a later time. Simply log into your account, select the patient's name, and upload the insurance information.

ToothReferral
Just Refer it

5 · IT KEEPS WORKING

It doesn't end at Submit.

Every referral becomes a tracked case with status updates, messages, a signed completion note, and a monthly report on your form.

ToothReferral
Just Refer it

THE CHECKLIST

Secure. Yours. Complete. Easy. Still working after Submit.

If your referral form misses one of these, it's costing you referrals you never see.

The referral form that keeps working after you hit submit.

A web form sends an email

Hook (first line)

A web form sends an email. Tooth Referral starts a case.

Caption · LinkedIn

A web form sends an email. Tooth Referral starts a case.

That one sentence is the whole difference. An email has to be found, read, forwarded and remembered. A case comes with its X-rays and insurance, shows both offices where things stand, keeps the messages in one place, and ends with a signed completion note.

If your referral process depends on someone remembering to check an inbox, it isn't a process yet.

5 questions to ask your referral form

Hook (first line)

Five questions to ask your referral form before the next referral comes in.

Caption · LinkedIn

Five questions to ask your referral form before the next referral comes in:

1. Is it HIPAA compliant and encrypted?
2. Does it carry X-rays and insurance, or just a name and phone number?
3. Can the referring dentist see the status without calling your office?
4. Does a signed completion note go back when treatment is done?
5. Can you see who refers to you, and how fast your team made first contact?

If the answer is mostly no, your form is sending emails, not referrals.

With Tooth Referral it's yes to all five, and setup takes about five minutes.

#DentalReferrals #HIPAACompliance #DentalOfficeManager #DentalPracticeManagement

Caption · Instagram / Facebook

Quick audit time 📝 Ask your referral form these 5 questions:

1️⃣ HIPAA compliant and encrypted?
2️⃣ X-rays and insurance included?
3️⃣ Can the dentist see the status without calling?
4️⃣ Signed completion note sent back?
5️⃣ Can you see who refers and how fast you called?

Mostly no? Your form is sending emails, not referrals.

Save this and share it with your office manager 📌
