TOOTH REFERRAL · LINKEDIN CAROUSEL 3 OF 3 · ONE FEATURE: REQUEST FROM PATIENT (SECURE INSURANCE LINK)

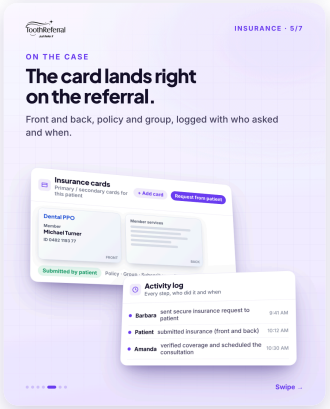

Stop chasing insurance cards

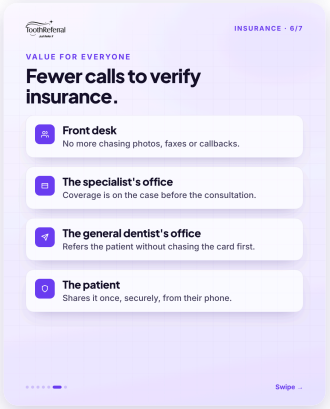

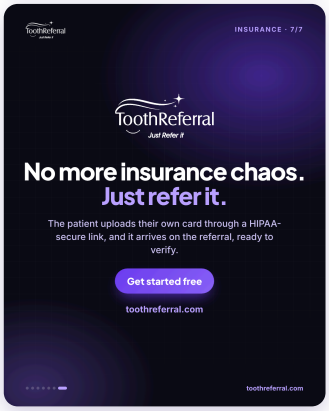

Hook (first line)

"Can you text us a photo of your insurance card?" There's a better way to ask.

Caption

"Can you text us a photo of your insurance card?" There's a better way to ask.

Photos in personal texts, blurry faxes, a missing back side, and patients rescheduled because coverage wasn't checked in time. That's insurance chaos, and the front desk lives in it.

In Tooth Referral, either office, general dentist or specialist, can click one button on the referral, Request from patient, sends the patient a HIPAA-secure link. They snap the front and back of their card on their phone, no account needed, and it lands right on the case with policy and group details, logged with who asked and when.

Fewer calls to verify insurance. The general dentist refers without chasing the card. The specialist has coverage on file before the consultation. The patient shares it once.

No more insurance chaos. Just refer it.
