THE SERIES AT A GLANCE

One message per post. Every post answers the same three questions.

01

The leak is inside your own office

Move specialists from 'we need more GP referrals' to 'we are losing the referrals we already get'. Introduce ToothReferral as a pipeline, close on one-referral ROI and the 5-minute setup.

THEY NEED A NEW REFERRAL SYSTEM (BRAND AWARENESS)

02

One shared network, not another portal

Show the single-platform model: both offices on the same dashboard, no codes or links. Turn it into ROI through GP loyalty, then the 5-minute setup.

WHAT THEY GET (ONE SHARED NETWORK) + CLOSED-LOOP COMMUNICATION

03

Built to survive turnover, built to sell

Make the ROI concrete three ways, show the guardrails and handoffs that make the pipeline survive staff turnover, and position it as a transferable asset that raises practice value.

ROI (THREE WAYS) + BUILD FOR SALE + EASY TO IMPLEMENT

What they get

One shared referral network and pipeline, shown on the real ToothReferral dashboard.

Why they need it

The return: one referral that doesn't leak, one new referral, or one case saved during turnover pays for it.

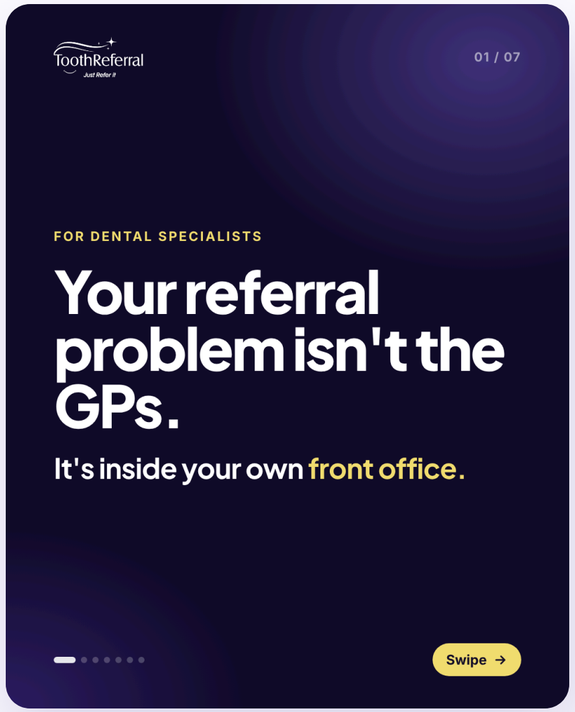

How to start

Live in about five minutes, and it becomes a transferable asset that adds value every day.

POST 01 · THEY NEED A NEW REFERRAL SYSTEM (BRAND AWARENESS)

The leak is inside your own office

Move specialists from 'we need more GP referrals' to 'we are losing the referrals we already get'. Introduce ToothReferral as a pipeline, close on one-referral ROI and the 5-minute setup.

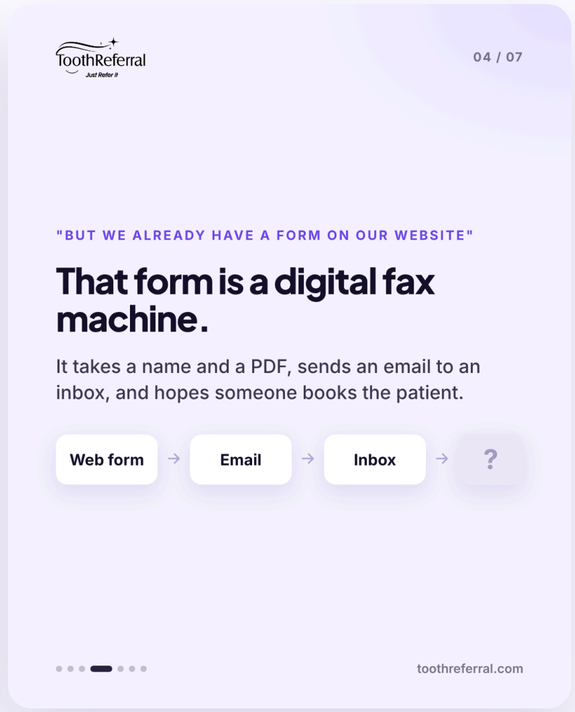

01 Hook: myth flip aimed at the front-office leak

02 Three named leaks the viewer recognises

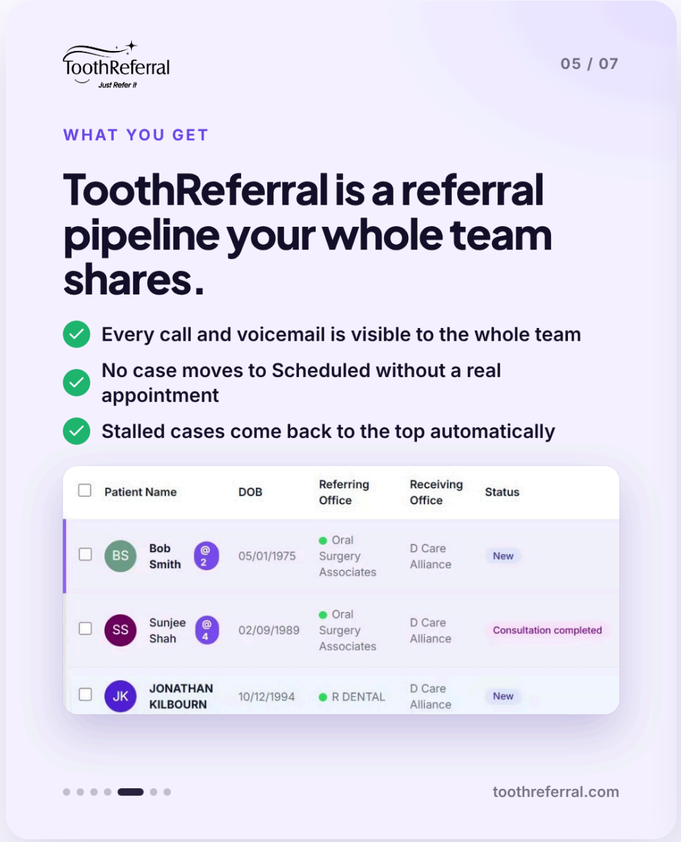

03 Scale of the loss

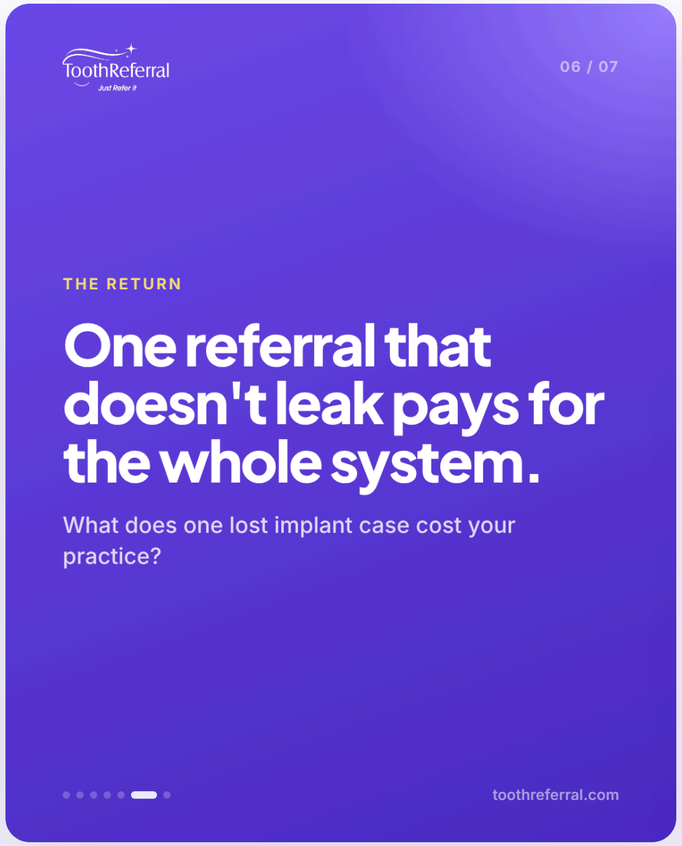

04 Objection: 'we already have a form'

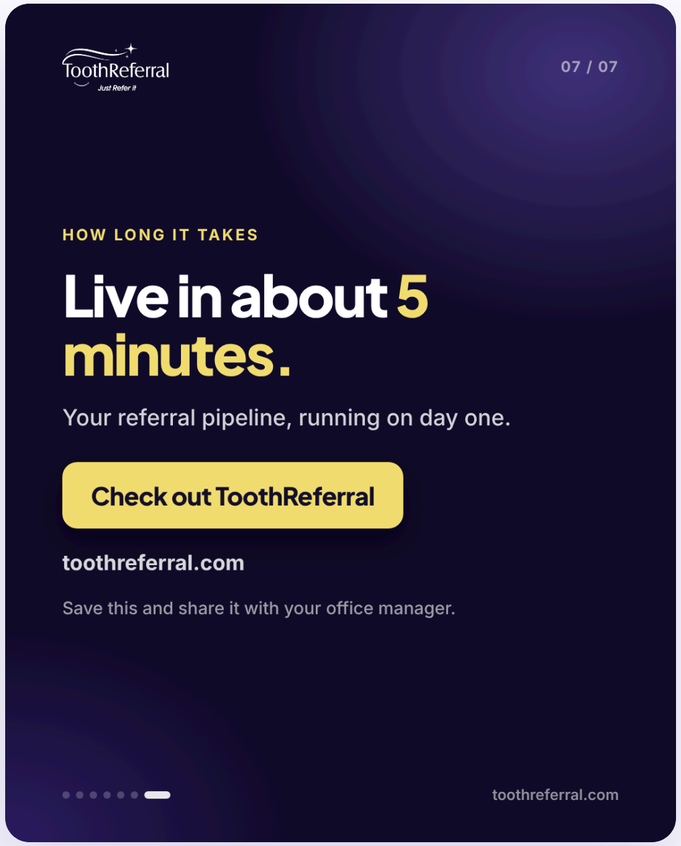

The leak is inside your own office

05 What they get, on the real dashboard

06 ROI

07 5-minute setup + soft CTA

POST 01 · CAPTION, KEYWORDS AND HASHTAGS

HOOK · FIRST LINE OF THE CAPTION

Your referral problem probably isn't the GPs. It's the voicemail nobody returned.

Most specialists think the fix is more GPs sending cases. Look at what happens to the cases you already get.

A coordinator leaves a voicemail on Monday and is out sick on Tuesday. Someone clicks "Scheduled" when they meant "Received", and the patient drops off everyone's list. A team member quits, and their follow-ups go with them. In a busy specialty office that adds up to tens of thousands in lost production every month.

ToothReferral is the referral pipeline built for exactly this. Every call, voicemail and status change is visible to your whole team. A case can't be marked Scheduled without a real appointment behind it, and stalled cases come back to the top on their own.

One referral that doesn't leak pays for the system, and setup takes about five minutes.

Swipe through, then send this to whoever runs your front desk.

TRENDING KEYWORDS

Work these into the caption, alt text and the LinkedIn version.

- dental referral software
- specialist referral management
- dental front office
- lost production
- staff turnover in dental practices
- HIPAA-compliant referrals

POST 02 · WHAT THEY GET (ONE SHARED NETWORK) + CLOSED-LOOP COMMUNICATION

One shared network, not another portal

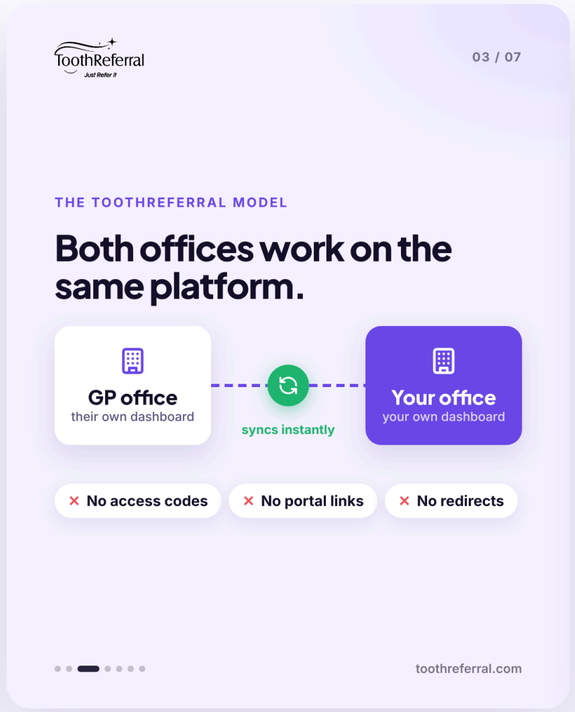

Show the single-platform model: both offices on the same dashboard, no codes or links. Turn it into ROI through GP loyalty, then the 5-minute setup.

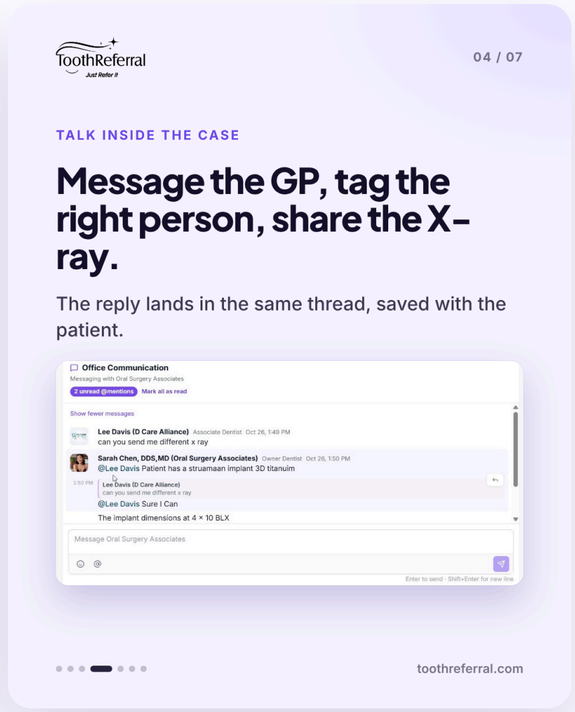

01 Hook: the uncomfortable truth about portals

02 The GP's side of a portal, step by step

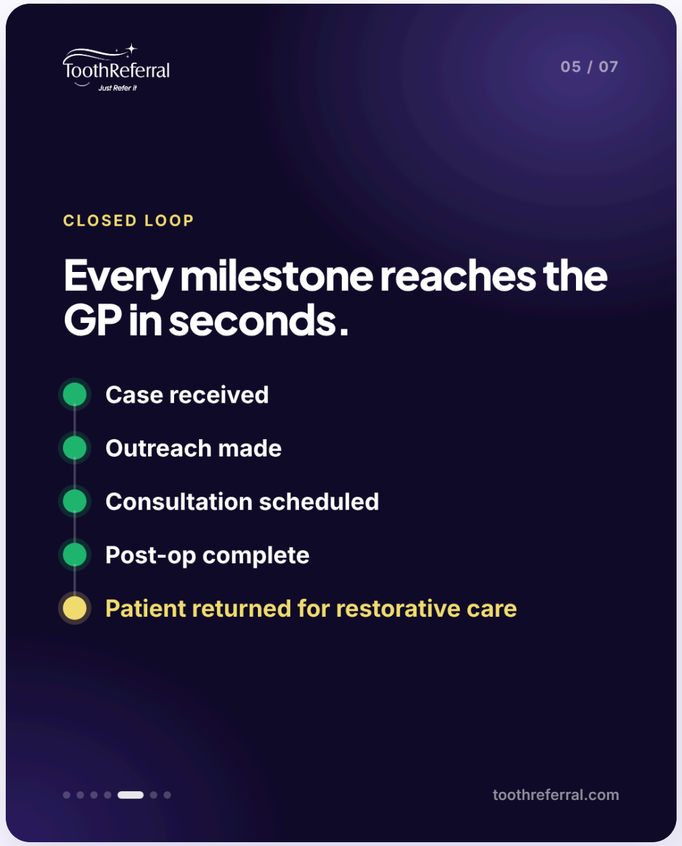

03 The shared-platform model

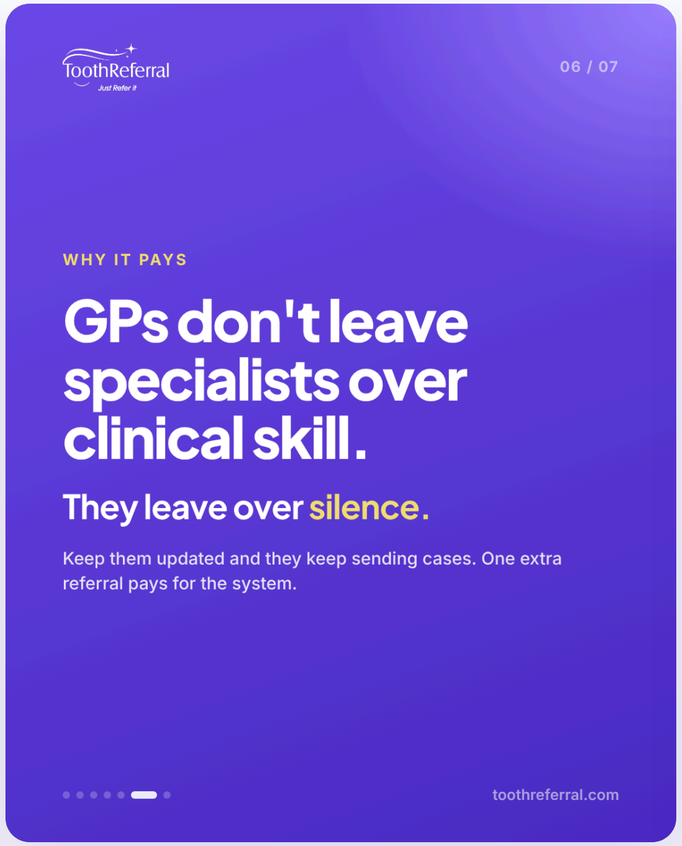

04 What they get, on the real dashboard

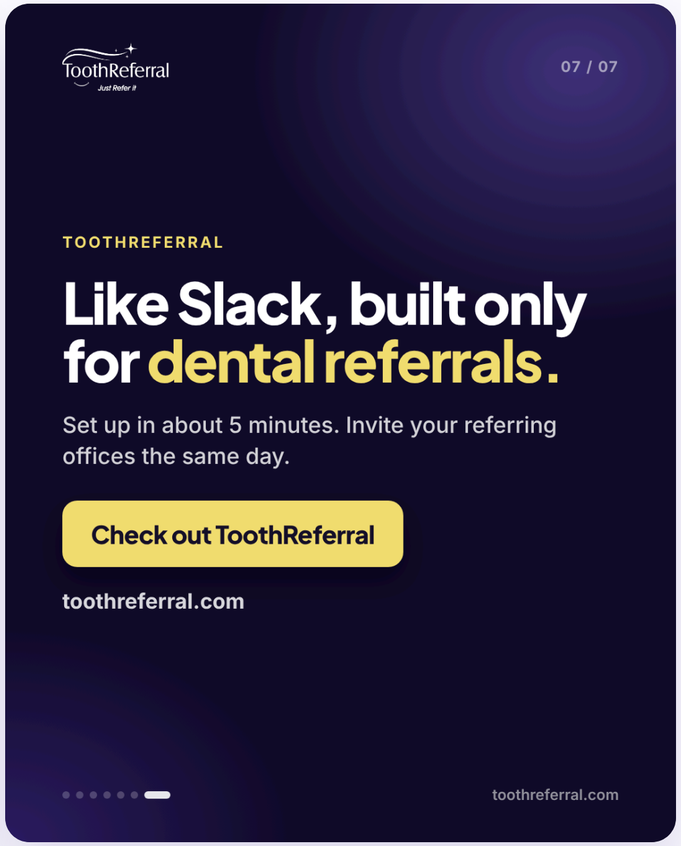

One shared network, not another portal

05 Closed loop: milestones pushed in seconds

06 Why it pays: GPs leave over silence

07 Positioning line + 5-minute setup + CTA

POST 02 · CAPTION, KEYWORDS AND HASHTAGS

HOOK · FIRST LINE OF THE CAPTION

Ask a GP how they feel about your referral portal. Then brace yourself.

A portal link, an access code, a code that expired last week. Plenty of referring offices give up and call your front desk instead, which is the phone tag the portal was meant to end.

ToothReferral works differently because both offices are on it. The GP has their own dashboard and so do you. When they send a case, it shows up in both. When you post a message or upload an X-ray, it lands in their patient feed straight away, with no codes and no redirect to someone else's website.

Coordinators, assistants and doctors on both sides see the same status, radiographs and questions. Think of it as Slack built only for dental referrals.

GPs rarely leave a specialist over clinical skill. They leave when they stop hearing back. Keep them in the loop and they keep sending cases, and one extra referral pays for the system. Setup takes about five minutes.

Tag a referring office you'd love to stop playing phone tag with.

02 Key-person risk and practice valuation

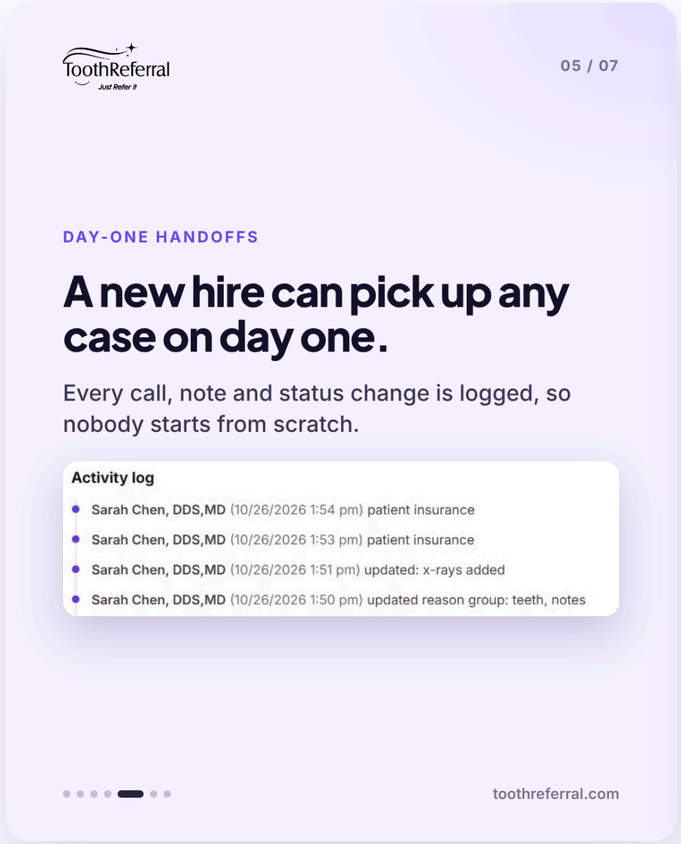

03 ROI, three ways

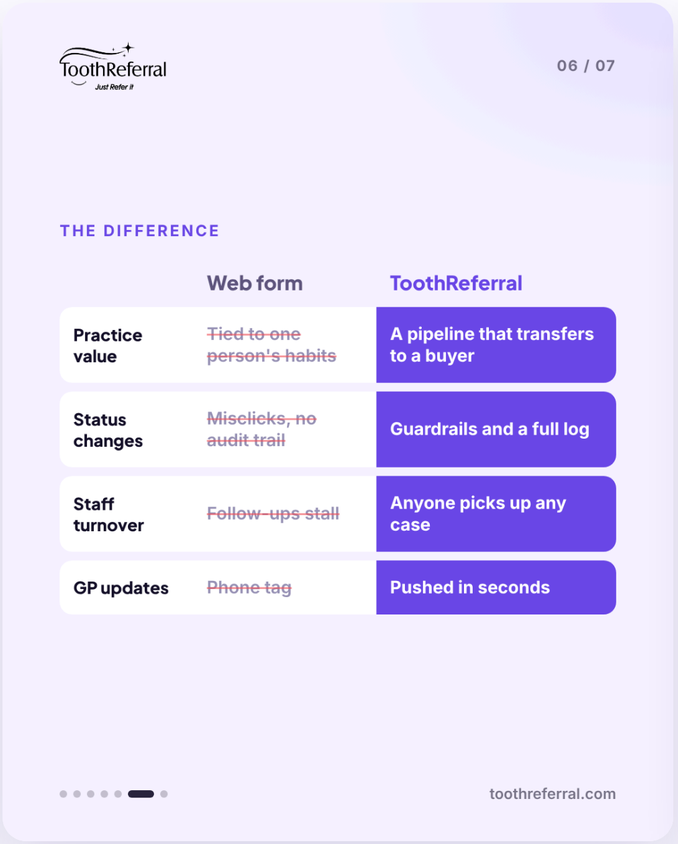

04 Guardrails on statuses, on the real dashboard

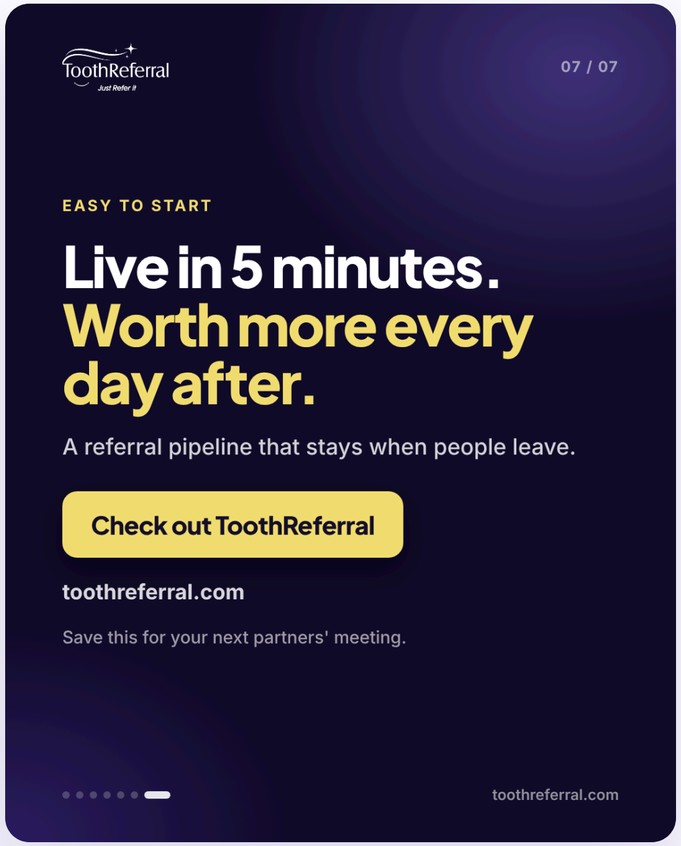

Built to survive turnover, built to sell

05 Day-one handoffs, on the real activity log

06 Web form vs ToothReferral

07 5-minute setup + asset framing + CTA

HOOK · FIRST LINE OF THE CAPTION

If your front desk quit tomorrow, would your referrals still get booked?

For a lot of specialty practices the honest answer is no. The pipeline lives in one coordinator's head, a stack of sticky notes and an inbox only they check. Buyers and DSOs know this. They call it key-person risk, and they price it in when they value a practice.

ToothReferral turns that into a system that stays when people leave. Every case is tracked from received to scheduled to returned for restorative care, and every call, note and status change is logged. A new hire can open the dashboard on day one and pick up exactly where the last person stopped.

Three ways it pays for itself:
1. One new referral covers the system.
2. One referral saved from leaking covers it.
3. One case you'd have lost when someone left covers it for a full year.

Setup takes about five minutes, and the pipeline keeps adding value to your practice after that.

Save this for your next partners' meeting.

Cover slide
Hook: the turnover question

Ready to post once these are signed off.

- **Order:** post 01 first (the need), then 02 (what they get), then 03 (the return). Two to three days apart keeps one story running.
- **Cover slide carries the hook.** The caption's first line repeats it so it shows before "more".
- **Dashboard screens are the real product** with fictional demo patients; no real patient data appears.
- **ROI claims stay as approved:** "one referral pays for the system" and "tens of thousands a month". No prices are quoted.
- **Hashtags:** five per post, dental industry tags. Check current volume in Instagram search on the day you post.
- **LinkedIn:** upload the same 7 slides as a PDF document post and use the caption without hashtags in the body.
