TOOTHREFERRAL · CONVERSATIONAL STORY SCRIPTS

Four stories that start as a conversation and end with the fix

Scripts 14-17. Each one opens on a natural, everyday moment, turns to a real front-office problem, then shows how ToothReferral solves it. Every story uses a different problem and a different point of view.

1 · CONVERSATION
A real moment between real people: coffee, small talk, a phone call.

2 · PROBLEM
An everyday problem shown as human error, never as anyone's fault.

3 · FIX
What ToothReferral does, shown on the real product, plus one ROI line and "about five minutes to set up".

14	**Nothing to Fill Out** Patient story	Patients become the courier between two offices: clipboards, insurance cards read out loud, X-rays that never arrive by fax.
15	**The Sick Day** Front desk story	A voicemail was left, then the person who left it was out sick. Nobody else knew a call-back was pending, so the patient waited.
16	**"Where's My Patient?"** Referring office story	The communication black hole: the referral goes out and then silence. The patient blames their own dentist; the office spends its lunch break on hold.
17	**First Day, No Notebook** Turnover and owner story	When a coordinator leaves, nobody knows what still needs to be done: pending call-backs, consults with no note, half-verified insurance.

> Client rules applied: "general dentist", never "GP"; offices Gentle Dental (referring) and St. Andrew's Family Dental (specialist); staff only Barbara, Tanya, Amanda, Greg; no doctors' names; no red in our graphics; the front desk is always the hero. Dashboard numbers come from the canonical analytics reference (reel/public/analytics-ref). ROI figures are "potential" and come from the client call of Nov 5.

SCRIPT 14 · PATIENT STORY

Nothing to Fill Out

The patient's point of view: what a good referral feels like from the waiting room.

EVERYDAY PROBLEM

Patients become the courier between two offices: clipboards, insurance cards read out loud, X-rays that never arrive by fax.

HOW TOOTHREFERRAL FIXES IT

Referral, X-rays and insurance arrive together, shared with both offices. The insurance card comes from the patient's own phone through "Request from patient".

Length About 80 s (10 clips of 8 s)

Look Handheld, warm morning light; one desaturated flashback; split screen for the two offices; two dashboard inserts.

CAST

Bob Smith	Patient, early 50s, friendly, a little nervous about an implant consult
Greg	Front desk, St. Andrew's Family Dental (the specialist office)
Tanya	Front desk, Gentle Dental (the referring general dentist office)

STORY

01 Natural opening — 0:00

Parking lot. Bob sits in his car, phone on speaker, a fat folder on the passenger seat.

BOB Yeah, I just parked. ... I know, I know. I brought everything this time. Insurance card, the X-ray CD, the letter from Gentle Dental.

BOB (laughs) Last time I sat there forty minutes with a clipboard. Okay. Love you. Wish me luck.

02 Walk-in — 0:12

Bright, calm reception. Greg looks up and smiles before Bob reaches the desk.

GREG Morning! You must be Bob. Gentle Dental sent you over for the implant consult, right?

BOB (already opening the folder) That's me. So I've got my insurance card here, and the X-rays are on this CD somewhere...

GREG You can keep those. We already have them. Front and back of your card, your group number, and the X-rays Gentle Dental took on Tuesday.

03 The surprise — 0:24

Close on Bob. He holds the folder like he doesn't know what to do with it.

BOB Wait... I didn't fill anything out.

GREG You did, actually. Remember the secure link we sent you on Tuesday? You took a photo of your card. Took you about thirty seconds.

BOB (laughs) That was it? I thought that was a reminder.

04 The problem (flashback) 0:34

Desaturated, slightly cooler. A different, busier waiting room. Bob on a clipboard; a phone call at the desk.

BOB (VO)	The last time I saw a specialist, I spelled my group number out loud. Twice.
FRONT DESK (FLASHBACK)	(on the phone, apologetic) We never got the X-rays... could you fax them again?
BOB (VO)	The fax never showed up, so they took the X-rays again. I paid for them again.
ON SCREEN	When two offices don't share one system, the patient carries the paperwork.

05 How it works (split screen) 0:46

Left: Tanya at Gentle Dental. Right: Greg at St. Andrew's. Same case open on both screens.

TANYA	On our side it's one referral. I attach the X-rays, hit send, done.
GREG	And it lands here with everything. If the insurance is missing, I tap "Request from patient" and they send it from their phone.
INSERT	Case detail: Attachments "shared with both offices" - X-rays, Insurance cards, Request from patient. (Real recording, cs-01-case-detail.)

06 Closing the loop 0:58

Checkout after the consult. Bob is relaxed now.

BOB	Do I need to call my dentist and tell them how it went?
GREG	Nope. They'll get the consult note, signed, today. When it's time for your crown, they'll already know.
INSERT	Sign and Send Completion Note → "Consultation Note signed and sent successfully." (cs-07-signed-success.)

07 Button 1:08

Back in the parking lot. Bob calls home again, folder untouched on the seat.

BOB	Honestly? Best dental visit I've had. I didn't even sit down in the waiting room.
VO (FEMALE PRESENTER)	When the referral, the X-rays and the insurance arrive together, your patient walks in ready. Set up in about five minutes. Check out ToothReferral.

WHY IT PAYS (ROI LINE)

Smooth intake protects case acceptance (76% on the analytics reference) and saves the cost of repeat X-rays and re-verification. One case that doesn't walk out pays for the software.

WHAT MAKES THIS ONE DIFFERENT

Only story told by a patient. No dashboard talk until the split screen; the value is felt before it's explained.

SCRIPT 15 · FRONT DESK STORY

The Sick Day

Two front-desk colleagues at the specialist office, the morning after one of them was out sick.

EVERYDAY PROBLEM

A voicemail was left, then the person who left it was out sick. Nobody else knew a call-back was pending, so the patient waited.

HOW TOOTHREFERRAL FIXES IT

"Left a Voice Message" is a status everyone can see; Needs attention lists ghost referrals (3+ attempts) with Re-assign; the activity log shows who called and when.

Length About 75 s (9-10 clips of 8 s)

Look Two-shot at the front desk, natural office sound, one push-in on a sticky note; two dashboard inserts from the analytics reference.

CAST

Tanya	Front desk, St. Andrew's Family Dental; back after a sick day
Amanda	Office manager, St. Andrew's Family Dental
Chloe Henderson	Patient (voice on the phone), waiting for a bone graft consult

STORY

01 Natural opening — 0:00

Morning. Tanya hangs her coat, a little pale. Amanda slides a tea across the desk.

AMANDA Look who's back! Feeling better?

TANYA Mostly. I lived on soup and bad TV for two days. (sips) Okay. What did I miss?

AMANDA Honestly, a quiet Monday.

02 The question — 0:12

Tanya scans her monitor. A sticky note is curled at the edge of the screen.

TANYA Did Chloe Henderson ever call back? I left her a voicemail Friday about her consult.

AMANDA (beat) ...I didn't know you'd called her.

TANYA (peels off the sticky note: "call back Henderson") Yeah. That was the plan.

03 The problem — 0:24

Slow push-in on the sticky note. Office ambience drops out.

VO (FEMALE PRESENTER) Nobody did anything wrong. Tanya called, then she got sick. The follow-up only lived on a sticky note and in her head.

ON SCREEN Left a voice message. Nobody followed up.

VO And a patient who doesn't hear back usually books somewhere else.

04 The fix

0:38

Amanda pulls her chair over. Tanya opens ToothReferral.

AMANDA Okay, new rule. If you leave a voicemail, it goes in here, not on a sticky note.

TANYA (sets the status) "Left a Voice Message." Done. Now it's on the board for everybody.

INSERT Status board card "Left a Voice Message - 3" with Lily Cox, Chloe Henderson, Owen Ward and wait times. (analytics-ref/08-status-board.)

05 Coverage

0:50

Amanda points at the screen.

AMANDA So if you're out, I open this card and I know exactly who's waiting for a call.

TANYA And if somebody's been tried three times?

AMANDA It shows up under Needs attention. One click, Re-assign.

INSERT Needs attention: "2 ghost referrals - patients we have not reached, 3+ attempts logged - Re-assign". (analytics-ref/06-needs-staff.)

06 Payoff

1:02

The phone rings. Amanda answers while Tanya watches.

AMANDA St. Andrew's Family Dental, this is Amanda. ... Hi Chloe! Yes, Tanya left you a message Friday about your consult. I can book you right now.

TANYA (mouths) Thank you.

07 Button

1:10

Two-shot, both relaxed.

VO (FEMALE PRESENTER) People get sick. People forget. The follow-up shouldn't. ToothReferral sets up in about five minutes.

WHY IT PAYS (ROI LINE)

One referral that doesn't slip through the cracks pays for the software. Saving referrals like this one adds up to potentially about $5,000 a year.

WHAT MAKES THIS ONE DIFFERENT

About coverage between colleagues (sick days, days off, lunch breaks), not about lost emails. The staff are the heroes; the sticky note is the problem.

SCRIPT 16 · REFERRING OFFICE STORY

"Where's My Patient?"

The general dentist's office: the patient keeps calling them, and they have no idea what the specialist did.

EVERYDAY PROBLEM

The communication black hole: the referral goes out and then silence. The patient blames their own dentist; the office spends its lunch break on hold.

HOW TOOTHREFERRAL FIXES IT

Both offices see the same case in their own dashboard: live status, Office Communication chat with @mentions, and a signed completion note sent automatically. No access codes, no portal links.

Length About 85 s (10-11 clips of 8 s)

Look Starts at Gentle Dental, cuts to St. Andrew's; split screen for the chat; hold music as a sound gag.

CAST

Barbara	Office manager, Gentle Dental (the referring general dentist office)
Greg	Front desk, Gentle Dental
Amanda	Office manager, St. Andrew's Family Dental (the specialist office)
Mrs. Parker	Patient (voice on the phone), waiting on wisdom teeth surgery

STORY

01 Natural opening — 0:00

Gentle Dental break room, lunch. Barbara and Greg with takeout.

GREG How's your daughter liking college?

BARBARA She calls me every day about laundry. So, great.

GREG (phone buzzes, he checks the desk line) And... Mrs. Parker's on line two. Again.

02 The problem — 0:10

Barbara takes the call, food abandoned.

BARBARA Hi Mrs. Parker. ... Your surgery date? We sent the referral two weeks ago. ... I understand. Let me call them and get right back to you.

BARBARA (hangs up, to Greg) She thinks we forgot about her.

03 Old way (montage) — 0:22

Barbara on hold, phone wedged on her shoulder. Hold music. A clock on the wall jumps forward.

HOLD MESSAGE Your call is important to us. Please continue to hold.

BARBARA (VO) Nine minutes on hold. Then "we'll check and call you back." Nobody called back.

ON SCREEN General dentists don't stop referring over clinical skill. They stop over silence.

04 The switch

0:36

Same desk, a few weeks later. Barbara opens ToothReferral on her own screen.

BARBARA	Now I just look. Outgoing... Parker. "Consultation Scheduled", Thursday.
BARBARA	(types) "@Amanda, is Mrs. Parker all set for Thursday?"
INSERT	Office Communication with @mention; "All communications are HIPAA compliant and encrypted". (cs-08-case-messages.)

05 Split screen

0:48

Left: Barbara. Right: Amanda at St. Andrew's, sees the @mention and replies.

AMANDA	(typing, reading aloud) "Yes, Thursday at 10. We already have her insurance and X-rays."
BARBARA	(already dialing) Mrs. Parker? You're booked Thursday at ten. ... You're welcome!

06 Closing the loop

1:00

A few days later. A notification on Barbara's screen.

BARBARA	And there's the signed consult note. "Thank you for referring Mrs. Parker..."
INSERT	DocuSign completion note signed inside ToothReferral; list row shows "Signed Referral". (cs-06-signed-done / cs-07-signed-success.)

07 Button

1:10

Barbara turns to Greg.

BARBARA	Next wisdom teeth case? St. Andrew's. They actually talk to us.
VO (FEMALE PRESENTER)	One shared dashboard for both offices. No access codes, no portal links. Set up in about five minutes. Check out ToothReferral.

WHY IT PAYS (ROI LINE)

Offices refer more to specialists who keep them updated. New referrals from the network are worth potentially $5,000-$10,000 a year; St. Andrew's Family Dental is already the top sender on the analytics reference (7 of 28).

WHAT MAKES THIS ONE DIFFERENT

The only story told from the referring office's side. The specialist wins because the general dentist's staff see the value.

SCRIPT 17 · TURNOVER AND OWNER STORY

First Day, No Notebook

A new front-desk hire on day one, and the practice owner checking in that evening.

EVERYDAY PROBLEM

When a coordinator leaves, nobody knows what still needs to be done: pending call-backs, consults with no note, half-verified insurance.

HOW TOOTHREFERRAL FIXES IT

Everything lives in the system, not in one person: the status board shows every patient, wait time and next step; the owner sees it all on the analytics page any time.

Length About 85 s (10-11 clips of 8 s)

Look Walk-and-talk tour (people moving, per the client call); dashboard screen recordings; an evening scene at home for the owner.

CAST

Greg	New front desk hire, St. Andrew's Family Dental, first day
Amanda	Office manager, St. Andrew's Family Dental
The owner	The specialist who owns the practice (no name, seen from behind or in a wide shot; voice only is fine)

STORY

01 Natural opening — 0:00

Walk-and-talk through the office. Amanda hands Greg a coffee.

AMANDA Break room, bathroom, and the coffee machine. Be nice to it, it has moods.

GREG (laughs) Noted. So, did the last coordinator leave notes? Like a list of who needs a call back?

02 The problem — 0:10

Amanda stops walking. Honest beat.

AMANDA When she left last year, we found three sticky notes and forty voicemails. She was great. It was all just in her head.

AMANDA It took us weeks to figure out who was still waiting.

ON SCREEN A coordinator leaves, and nobody knows what still needs to be done.

03 The fix — 0:24

At the desk. Amanda opens ToothReferral on Greg's screen.

AMANDA This time, your notebook is the status board.

INSERT Status board: New 2, Received 1, In Progress 1, Left a Voice Message 3, Consultation Scheduled 3, Consultation Completed 4, Scheduled 4 - each with names and wait times. (analytics-ref/08-status-board.)

AMANDA New: two patients waiting for a first call. Start with Ryan Bailey.

04 Day one, doing real work

0:38

Greg on the phone, then updates the case.

GREG	Hi Ryan, this is Greg from St. Andrew's Family Dental...
INSERT	Update Status → toast "Success - Status updated successfully! A notification has been created." (real recording.)
GREG	(to Amanda) That's it? It even tells the referring office?
AMANDA	Automatically.

05 The owner (evening)

0:52

Evening at home. The owner on a laptop at the kitchen table; we see the screen, not the face.

OWNER (VO)	I used to find out about problems months later. Now I just look.
INSERT	Analytics: 28 received (+27% vs prior), time to first contact 3.7 h, case acceptance 76%, Needs attention 2 / 2 / 3. (analytics-ref/01-header-kpis, 06-needs-staff.)
OWNER (VO)	Twenty-eight referrals this month, first contact in under four hours. And I didn't have to ask anyone.

06 Button

1:06

Back at the office next morning. Greg already at the desk, coffee in hand, board open.

AMANDA	Look at you. Day two and you already know everything.
GREG	It's all right here.
VO (FEMALE PRESENTER)	Even if your whole front desk changes tomorrow, your referrals don't skip a beat. And a practice that runs on a system, not on memory, is worth more when you sell. Set up in about five minutes. Check out ToothReferral.

WHY IT PAYS (ROI LINE)

One referral missed because someone left can pay for a whole year of the software. A turnkey, data-backed referral system can raise practice value about 5-10% (about $50,000-$100,000 on a $1M practice).

WHAT MAKES THIS ONE DIFFERENT

The only story about staff turnover and the owner's view. It shows the analytics page as the owner's peace of mind.
