POST 1 · CAROUSEL · 7 SLIDES · PAIRS WITH CAMP-FORM-VS-SOFTWARE.MP4

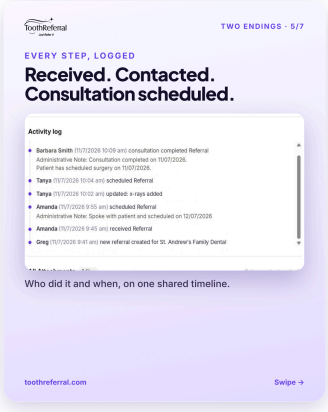

Same patient, two endings

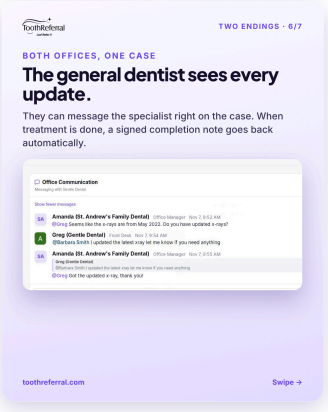

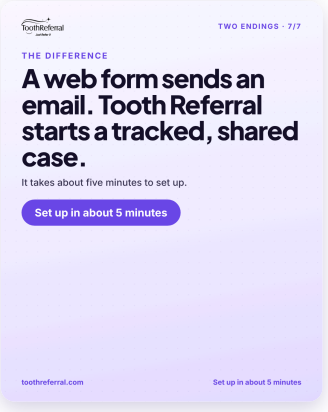

Hook (first line)

Same patient. Same referral. One ends in an inbox, the other ends with a signed note.

Caption

Same patient. Same referral. One ends in an inbox, the other ends with a signed note.

Here's the part most specialist websites don't think about: what happens after a general dentist hits Submit?

With a web form, the referral turns into an email. It lands in a shared inbox next to supply orders and voicemails. No confirmation, no status. Did anyone call the patient? Usually somebody has to pick up the phone to find out.

With Tooth Referral, the same referral lands as a case. The X-rays and the insurance come with it, your team sees it right away, and every step is logged: received, contacted, consultation scheduled. The referring dentist sees each update and can message you on the case. When treatment is done, a signed completion note goes back on its own.

Nobody did anything wrong in the first version. The form just stops working the moment it's sent.

Swipe through both endings. Which one does your website give the dentists who trust you with their patients?

FOR DENTAL SPECIALISTS

Same patient. Same referral. Two very different endings.

What happens after a general dentist hits Submit depends on what's behind your website.

A web form

- Turns into an email
- Sits in a shared inbox
- Nobody knows what's next

Tooth Referral

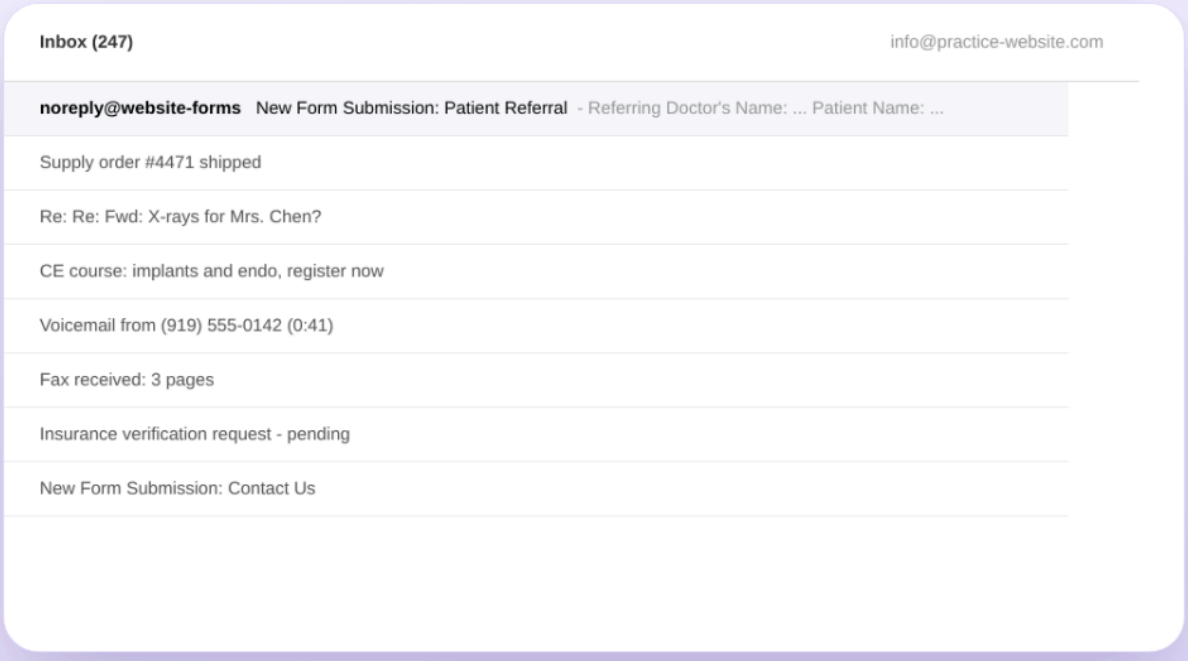

- Lands as a case
- X-rays and insurance attached
- Every step logged

ENDING ONE · THE WEB FORM

You hit Submit. It becomes an email.

One more message in an inbox, between supply orders and voicemails.

No confirmation **No status**

THE QUESTION NOBODY CAN ANSWER

Did anyone call the patient?

The referring office doesn't know. The specialist's team may not know either. So someone picks up the phone and asks.

ENDING TWO · TOOTH REFERRAL

The referral lands as a case.

X-rays and insurance arrive with it, and the specialist's team sees it right away.

ToothReferral

EVERY STEP, LOGGED

Received. Contacted. Consultation scheduled.

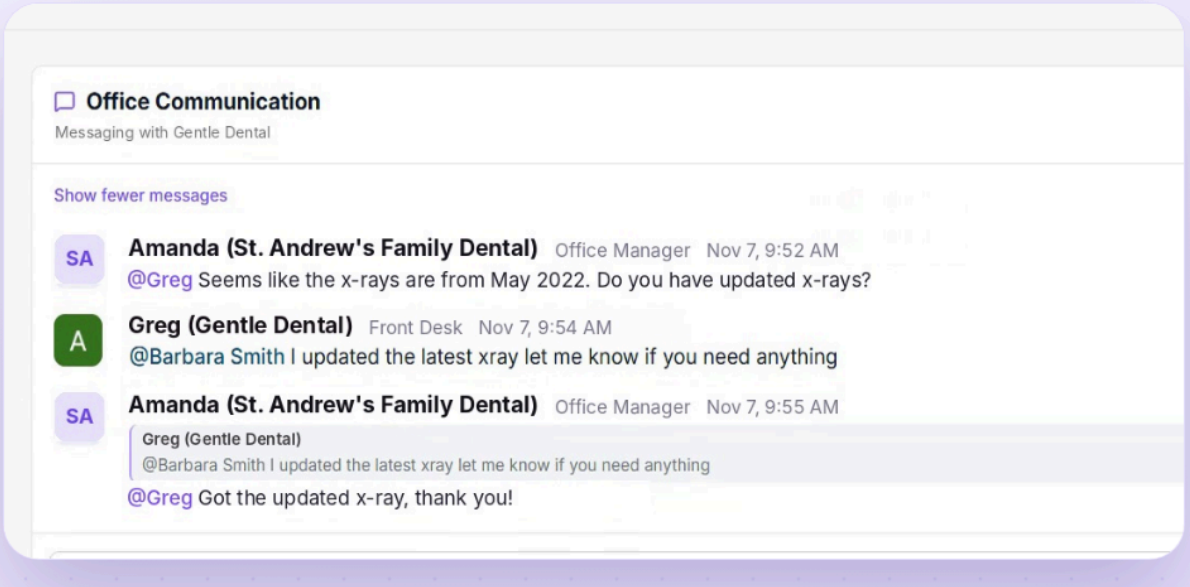

Who did it and when, on one shared timeline.

BOTH OFFICES, ONE CASE

The general dentist sees every update.

They can message the specialist right on the case. When treatment is done, a signed completion note goes back automatically.

THE DIFFERENCE

A web form sends an email. Tooth Referral starts a tracked, shared case.

It takes about five minutes to set up.

Set up in about 5 minutes
